Overview

This document goes over Basic OneNote Information

Information / Steps

OneNote is utilized daily for multiple functions. Onboarding, training, system info, production info, training information and processes, and office and personal to-do lists.

You will be assigned your own OneNote that Heather / management will have access to.

You are not allowed password protect pages. It messes up IT processes.

OneNote and all computer backup are stored on our server.

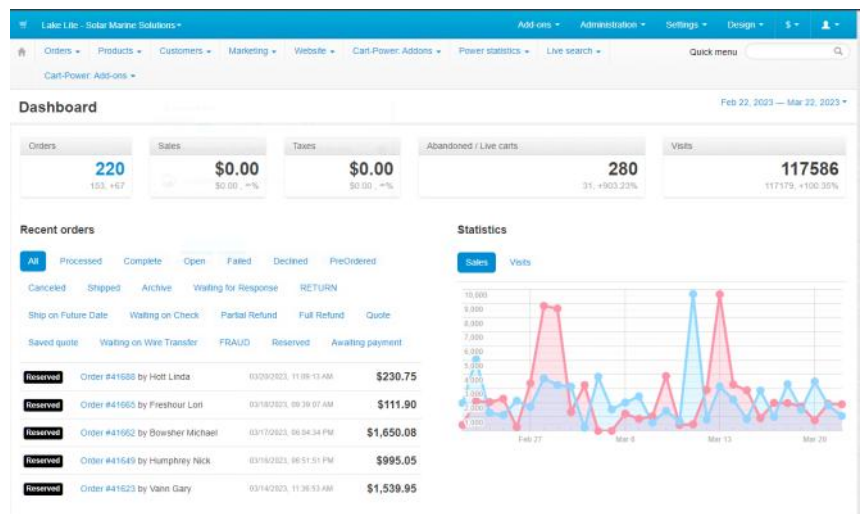

Admin Panels

Thursday, March 16, 2023 4:36 PM

Overview

The Admin Panel General Usage

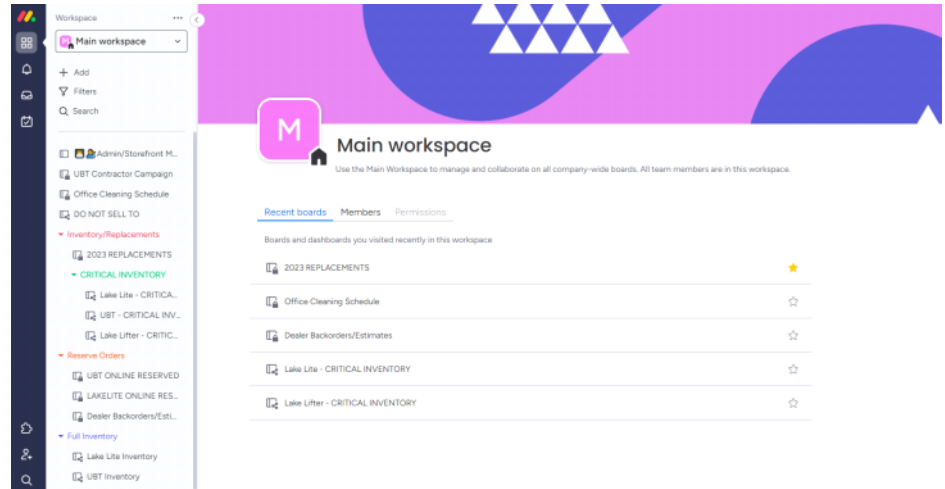

Information / Steps

- Each of our websites have their own Admin Panel
- The Admin Panel is the backside of our Lake Lite, Ultra Bright Tech, and Lake Lifter websites. Each site will have its own Admin Panel.
- We use it to view orders placed by our retail customers and process orders to prepare for shipment.
- The Admin panel works directly with Webgility as a shipping system.
- We log all customer communications in the staff notes box. This allows anyone to jump in and help with issues.
- Order statuses you will encounter are below.
 - o **Processed** - Order needs reviewed and processed for shipment
 - o **Archive** - Order has been completed and posted to QuickBooks
 - o **Failed** - Payment failed.
 - o **Quote** - Customer submitted quote instead of paying
 - o **Open** - Payment was not collected
 - o **Waiting for Response** - We have reached out to the customer and are waiting for them to contact us or there is an issue with the order
 - o **Reserved** - item is out of stock
 - o **Awaiting Payment** - Item is almost ready to ship and we need to reach out to finalize the order
 - o **Pre-Ordered** - Order is waiting on product to arrive for shipment
 - o **Ship on future date** - Customer request to pick up an order or request to ship a different day
 - o **Partial Refund** - Part of the order was refunded.
 - o **Full Refund** - Whole order was refunded
 - o **Saved Quote** - We do not delete any orders. Orders that money was not collected for will get filed as saved quote once the customer has been contacted and/or a new order has been placed.
 - o **Incomplete Order** - The customer was in the pay system and closed out or cancelled.

Overview

This document goes over
Monday.com General Usage

Information / Steps

Monday.com is the backed system for all of our companies and is the where we log, track, and report the below items.

- Inventory levels
- Pending orders that are in production
- Dealer requests that are future dated
- Product updates
- Online order tracking for Reserve and Pre-ordered status
- Do Not Sell To Customers
- Warranty replacements
- Warranty replacement issues and testing results

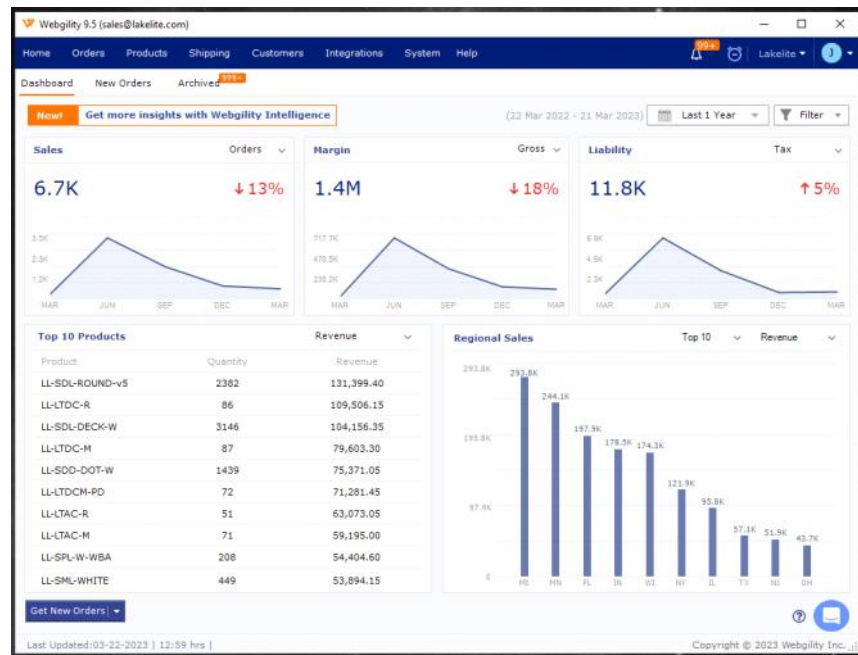

To start the main function for you will be to report, track, and update product issues and testing results for warranty replacements. You will also track the Online Reserve & Preorders for retail customers so product count can be tracked for production.

Side Notes:

- **Make sure to add ALL warranty replacement shipments to Monday.com. This helps us to track the number of replacements shipped each year as well as the issues with each items**

Overview

This document goes over the general usage of Webgility.

Information / Steps

The Admin Panels work directly with Webgility to process the shipping for our online orders. Once an order is reviewed and ready for shipment, you will download the order to Webgility.

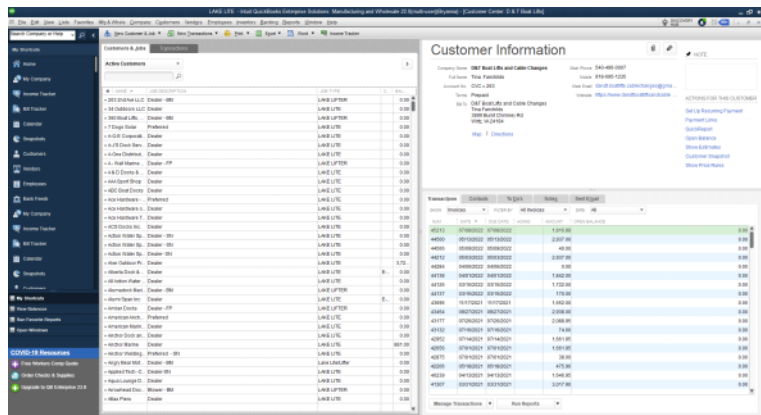

- The order needs to be in Processed status to download correctly. An order in a different status can be downloaded manually, however, when it is posted to QuickBooks the email will state the status the order downloaded as.
- Process the shipping Label and Post the order to QuickBooks

QuickBooks

Thursday, March 23, 2023 10:41 AM

Overview

This document goes over the general usage of QuickBooks

Information / Steps

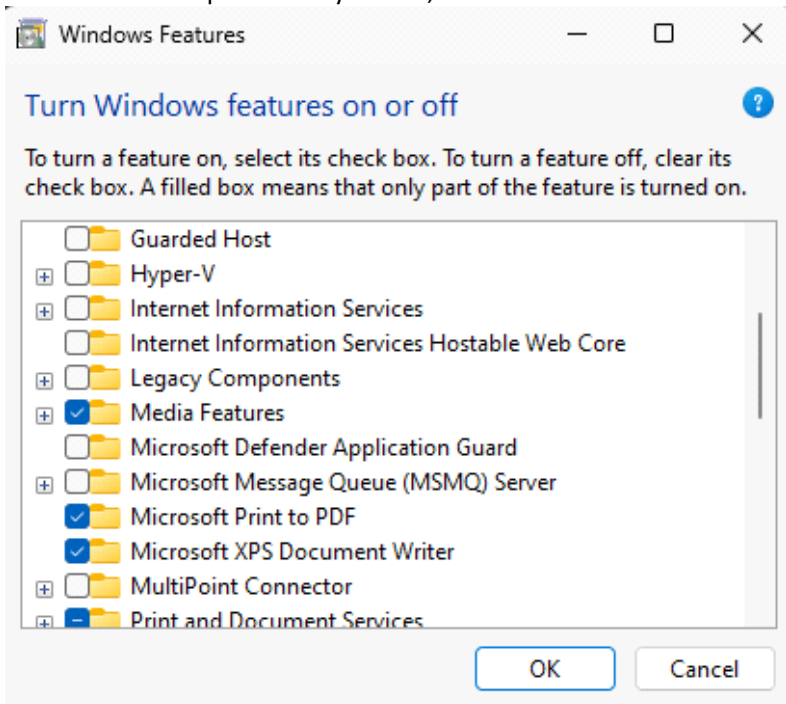

QuickBooks is where all accounts and finances are handled. This is also where all orders (online and dealer) are logged.

The main function you will use QuickBooks for will be dealer account management. Examples below.

- Creating new accounts
- Deactivating accounts
- Entering orders
- Editing Dealer information
- Sending Invoices

QuickBooks doesn't let you send invoices or save .PDFs? Most likely, you need to enable Microsoft XPS Document Writer

1. Windows+R
2. Type: optionalfeatures and hit enter
3. The list is alphabetically sorted; locate "Microsoft XPS Document Writer" and enable it

FedEx Ship Manager Information

Friday, March 24, 2023 12:16 PM

Overview

This document goes over FedEx Ship Manger

The screenshot displays the FedEx Ship Manager application window. The title bar reads "FedEx Ship Manager | v.3621-a | 0410815 | Lake Lite". The menu bar includes "File", "Databases", "Customize", "Utilities", "Integration", "Inbound", "fedex.com", and "Help". The "Ship" menu is open, showing options like "LTL Freight", "Track", "Shipping list", "Address Book", "Reports", "Close", and "FedEx.com". The main interface is divided into several sections: "Recipient information" (with fields for Recipient ID, Country, Contact name, Company name, Address 1-3, Postal code, City, Telephone, and checkboxes for residential address, address book, and Auto Track), "Package and shipment details" (with fields for Number of packages, Weight, Service type, Package type, Package dimensions, Ship date, and Declared value), "Billing details" (with fields for Bill transportation to, Acct #, Department notes, Customer reference, and P.O. number), and "Additional references" (with fields for Invoice number and Shipment ID). A "Shortcuts" section on the right includes "Special Services" and "Auto Track". The status bar at the bottom shows "Comm Idle", "Clear fields", "Delete/Modify shipment", "Repeat shipment", "Override prefs", "Rate Quote and Transit Times", "\$11.06", "Dim Weight 13 lbs", "Multiple-piece shipment", and "Ship". The date and time "Friday, March 24, 2023 12:16 PM" are also displayed.

Information / Steps

Our FedEx Ship Manager is integrated with QuickBooks for easier shipping.

All dealer orders are processed through FedEx Ship Manager unless otherwise stated on the dealer account.

Since FedEx Ship Manager is integrated, after entering the invoice number on the ship manager, it will auto feed the invoice shipping details from QB. You will select commercial/residential shipping (this will be notated on the QB account), then complete the shipping transaction by entering quantity of boxes, box sizes and weights. Once the information is entered, you will select "Ship". The labels will print and the tracking details and shipping costs are automatically exported to the QuickBooks invoice where you can adjust final pricing and complete order.

FedEx Ship Manager will also be used to create needed "Call Tags"(prepaid return labels) when needed. You can automatically email them to customers, yourself, or print them to include with replacements.

Stamps (USPS)

Friday, March 24, 2023 2:10 PM

Overview

This document goes over
Stamps (USPS) Manager

Stamps
Example

The screenshot displays the USPS Stamps Manager web application. On the left is a blue sidebar with navigation links: Print, Postage Wizard, Stamps, Envelopes, Packages, International, Orders, History, Reports, Contacts, Supplies, Account, and Learning Center. The main content area is divided into sections. The 'Return Address' section shows 'LAKE LITE / ULTRA BRIGHT, PO BOX 414, LAOTTO IN 46763-0414'. The 'Delivery Address' section is empty with a 'Clear' button. The 'Package Details' section includes fields for Weight (0 lbs, 1.0 oz), Dimensions (0 L, 0 W, 0 H), Service (Parcel Select Ground Large Packa...), Tracking (Tracking), Add'l Options (Select), Insurance (Insure For), Mailing Date (03/28/2023), and Customs (Edit Form). A price table shows \$0.00 for Service, Tracking, Add'l Options, and Insurance. The 'Print Details' section shows 'Printing On' as 'Zebra/Etron Type - Standard 4x6 label - ro' and a 'Preview' button. At the bottom, it shows 'Total Cost: \$0.00' and buttons for 'Print Label', 'Print Sample', and 'Reprint'.

Information / Steps

We mainly use stamps to create labels for warranty replacements, market mailers, and samples. There are a few dealers that ask to ship the cheapest route and we will use stamps for them as well.

Stamps will always grey out once you click into it. As you hover over an area or enter into the area it will show back up. See the video to help.

For any packages .9 lbs. or under you will use Frist Class Mail.

For anything between 1-19 lbs. you will use whatever is cheapest. Generally that will be Parcel Select.

For anything over 20 lbs. or anything larger that 15*12*12 / 14*14*14, you will want to use FedEx.

Edit

Information / Steps

UPS is only used when specified by a dealer (usually they want to use their account to pay for the shipping cost). We do not have a daily pickup, so if the dealer wants to use UPS they will need to schedule the pickup or they will need to pay an additional fee for us to schedule the pickup.

We generally ask the dealer if they have a FedEx account or would like us to use ours due to cheaper shipping.

If a customer requests UPS we will ship via UPS and we will pay the pickup fee.

See the video to help with the processing steps.

Website Customer Reviews

Thursday, March 23, 2023 2:26 PM

Overview

This document goes over website customer reviews and how to process them.

Information / Steps

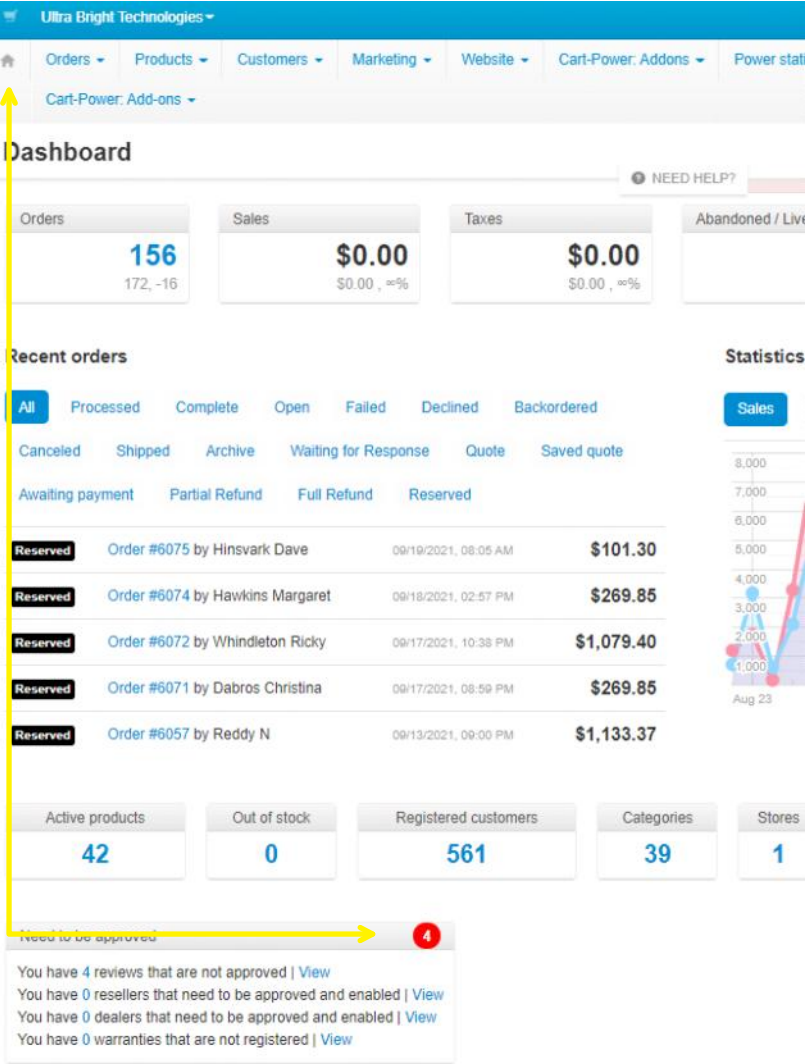

When a customer leaves a review for a product on our website, it will send to us for review and post to the live site.

Pending review are can be found on the front page of the Admin Panel. See picture →

When reviewing the customer review

- Ensure proper grammar
- Create a title from the review to make is stand out
- Edit the name to show the first name and last initial
- Save the review
- Click the "thumbs up to finalize and post to the live site.

Sometimes, customers will leave a review with pictures, when this happens, let Karrie know before editing/ posting, so she can enter the customer into our photo contest and possibly add them to the customer gallery.

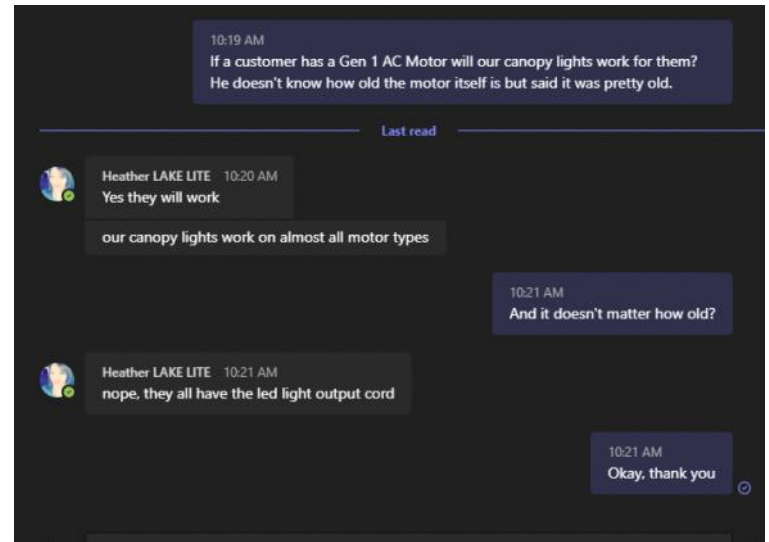

Common Questions

Wednesday, January 11, 2023 12:12 PM

1. What batteries does my light take? 1 or 2?
 - a. Depends on the light
2. What replacement parts do you offer?
 - a. Depends on the light
 - i. Batteries
 - ii. Hardware for battery covers
 - iii. Replacement bases, Lens covers
 - iv. LED bulb
3. Why is my light not staying on for long?
 - a. depending on light, could be brightness level or battery life
4. What if I replace the battery and the light still doesn't come on?
 - a. Battery troubleshooting
5. Why is my light flickering?
 - a. Battery is going dead

"It's just a FUSE typically shore station and a few companies provide those. So if the hydraulic pump or motor fails it blows the fuse..."
"So the customer may want to keep this on then. Lift techs motors have a protection mode in them so if something were to go wrong it would shut the motor off."

Order Processing

Thursday, March 9, 2023 2:32 PM

Overview

This document goes over the Online ordering process and guidelines.

Why this is important?

This is how we process orders.

How often is this completed?

- Daily

Who completes this?

Anyone that process orders.

Information / Steps

1. Review customer information to confirm billing/ shipping addresses match.
2. Review the item / quantity and use the shipping sheet to determine box / weight.
3. Add notes to the customer note section of box size and any notes needed for the shipping team. Print Invoice (Print Packing slip for International orders)
4. Download orders in Webgility
5. Select the corresponding order and click process order
6. Validate shipping address
7. Enter box and weight and select get rates. (We always ship via the cheapest option, unless the customer pays for a specific option)
8. Generate label
9. A popup will open.
 - a. If it is red, there is an error (get with HL until you know what they all mean)
 - b. If it is green, the order is good - close the popup and move to the next step
10. Once the order(s) are printed - select the orders you are finished with and click "Post to QuickBooks
11. Highlight customer name, item, quantity, and customer notes.
12. Verify customer name matches shipping label then staple together and give to shipping department.

See the video for order process example. The 3rd order on the video shows USPS International Shipping to Canada

Processing Orders

- Online orders received before 2PM must be processed same day unless there is an issue with the order. We have a Google Ad that says we ship same day, failure to ship same day could cost us thousands in fees.
- Any orders received after 2PM still need to be processed same day to help ensure the best customer service. This also helps the shipping team to stay on top of orders and reduce next day processing
- Dealer Orders must be processed same day, within reason. Try to keep the same practice as online, however, we do not have a Google Ad promise.
- Add notes to the admin panel for any customer communications. If you call and leave a voicemail for any reason, leave a note in the admin panel for others to be able to help with the order.
- **Make sure the order is in Processed status before downloading to Webgility. Once an order is downloaded you cannot change the status and the customer will get an email stating it is that status.**

Website Hidden Item

Tuesday, March 28, 2023 4:09 PM

Admin
Panel - Hi...

Overview

This document goes over how to find a hidden item on the Admin Panel

Information / Steps

Customers will call asking for certain items that we do not have listed on our live site, however it can still be found on the admin panel, added to a cart, and emailed to the customer.

Hidden items you can still send in a cart are:

- Replacement battery covers for lights (\$1.00 plus shipping)
- Buoy Ball D-Rings (\$5.00 plus shipping)
- Lift Tech Key (\$12.00 per key plus shipping)
- Lift Tech Drill Bit (\$22.00 plus shipping)
- Standard Bracket (\$30.00 plus shipping)
- Long Bracket (\$40.00 plus shipping)
- Ballast Pole (\$50.00 plus shipping)
- Piling Light Base (\$49.95 plus shipping)
- Lift Tech Motor Install Kit (\$120.00 free shipping)

See the attached video to show how to access hidden items.

Online Order - Combining Shipping

Wednesday, March 22, 2023 4:27 PM

Overview

This document goes over Combining shipping on Online orders

How often is this completed

- As necessary

Who completes this

Anyone that processes orders

Information / Steps

Sometimes a customer will place two orders. We can combine the shipping and save on shipping costs.

1. If the customer paid for shipping on the second order, you will refund the shipping charge.
2. Add notes on both orders on the Admin Panel stating "Combining shipping with order A/B"
3. Process the shipping for order "A" like normal and close out of it.
4. Double click on order "A" to open it back up and copy the tracking number.
5. Start the process for order "B" however, when the order opens click the drop down that says "Select Shipping Processor:" then select Manual Shipping
6. Select the carrier used for order "A" (USPS or FedEx)
7. Select the method (Ground or Home for FedEx and Economy for USPS)
8. Paste the tracking information from order "A" under tracking ID
9. Add note that says "Combining shipping with order "A"
10. Save the shipment and post to QuickBooks like normal
 - a. If there are notes already in the box that we need, copy and delete them from this box.
After the order is posted to QuickBooks, go back into the Admin Panel and input the notes there. Any notes left in this box will send to the customer.

Online Order - Payment Failed

Tuesday, March 14, 2023 2:34 PM

Overview

This document goes over how to handle Failed status on the Admin Panel

How often is this completed

- As necessary

Who completes this

Anyone that processes orders

Why this is important

To prevent losing an order

Information / Steps

Possible reasons the payment failed

- If the order is a high dollar value - it could be they have a spending limit.
- Entered CC information incorrectly.
- Wrong address/zip code.
- Braintree processing error.

If the order looks fishy have HL review.

If the order does not look fishy complete the below.

- Call customer
- If they answer - help finalize the order.
 - Once finalized - mark as saved quote (do not notify the customer)
- If they do not answer
 - Leave a voicemail
 - Send an email
 - Add notes to AP with date, your initials, and actions taken.

Online Order - Incomplete Order

Thursday, March 9, 2023 3:46 PM

Overview

This document goes over Online Order status Incomplete Orders.

How often is this completed?

- Daily.

Who completes this?

Anyone that process orders.

Why this is important?

To prevent losing an order.

Process / Steps

- If Braintree - Compile a list and email to Heather
- If PayPal
 1. Verify in PayPal if a Payment was received
 - i. Search the order number and by the last name
 2. If a payment has been received change the status to Processed (do not notify the customer) and process the order normally.
 3. If payment has not been received.
 - i. Call customer
 - i. If they answer - help finalize the order.
 - a) Once finalized - mark as saved quote (do not notify the customer)
 - ii. If they do not answer
 - a) Leave a voicemail
 - b) Send an email
 - c) Add notes to AP with date, your initials, and actions taken.

Online Order - Open Order

Thursday, March 9, 2023 3:53 PM

Overview

This document goes over Online Order status Open Order.

How often is this completed?

- As needed.

Who completes this?

Anyone that process orders.

Why this is important?

To prevent losing an order.

Process / Steps

You will complete the below steps for 3 days. On day 3 if you they do not respond, change the status to saved quote and allow it to notify the customer only.

- Call customer
 - If they answer - help finalize the order.
 - Once finalized - mark as saved quote (do not notify the customer)
 - If they do not answer
 - Leave a voicemail
 - Send an email
 - Add notes to AP with date, your initials, and actions taken.

Online Order - Quotes

Friday, March 10, 2023 10:50 AM

Overview

This document goes over Online Order Status - Quote

How often is this completed

- As necessary

Who completes this

Anyone that processes orders

Why this is important

To prevent losing an order

Information / Steps

An online order quote status comes up when a customer in checkout but decides to wait to order. Generally they want a discount, have questions, or wants to hold off on the order.

If the Quote has a phone number

- Call customer
 - If they answer - help finalize the order.
 - Once finalized - mark as saved quote (do not notify the customer)
 - If they do not answer
 - Leave a voicemail
 - Send an email
 - Add notes to AP with date, your initials, and actions taken.
 - Mark as a saved quote

If the Quote does not have a phone number

1. Send an email.
2. Add notes to AP with date, your initials, and actions taken.
3. Mark as a Saved Quote and allow it to notify the customer.

Online Order - Reserve Orders

Tuesday, March 14, 2023 1:42 PM

Overview

This document goes over how to process Online Reserve orders

How often is this completed

- As necessary

Who completes this

Anyone that processes orders

Why this is important

Gain a new Order

Information / Steps

These customers have been waiting for product that was out of stock. Generally Karrie will have you contact these customer just before shipping. She will change the status from Reserve Order to Awaiting Payment.

You will complete the below steps for 3 days. On day 3 if you they do not respond by EOD, change the status to saved quote and allow it to notify the customer only.

- Call customer
 - If they answer - help finalize the order.
 - Once finalized - mark as saved quote (do not notify the customer)
 - If they do not answer
 - Leave a voicemail
 - Send an email
 - Add notes to AP with date, your initials, and actions taken.

Online Order Status - Preorder

Wednesday, March 15, 2023 12:06 PM

Overview

This document goes over Preorder Status

How often is this completed

- As necessary

Who completes this

Anyone that processes orders

Information / Steps

We change an order Preorder when we are waiting for the product to come in from a truck. Once the product has been received and is ready to ship, you will do the below steps.

1. Change the status to Processed without notifying the customer or order department
2. Create the shipping label
3. Post to QuickBooks

Online Order - Fraud Verification

Tuesday, March 14, 2023 2:59 PM

Overview

This document goes over how to research and verify potential fraud threats

How often is this completed

- As necessary

Who completes this

Anyone that processes orders

Why this is important

To prevent losing money

Information / Steps

We need to be vigilant with possible fraud risks. If the billing and shipping addresses do not match and the order is over \$500.00 we need to check the below guidelines to determine if we are sending Digit Verification

First thing to check is if the customer has purchased previously.

1. In the Admin Panel under Orders - Select Archive - then search each step to see if they have ordered before.
 - a. Email (try without @gmailcom also)
 - b. Last name used for shipping
 - c. Last name used for billing
 - d. If there is a business, try searching one word of the shipping name

*Look at the phone numbers as well as the names. Check any order that has a similar phone number to see if the addresses match.

2. If they do not have a previous order check the below
 - If they paid with PayPal - check the payment to see if it is a verified customer. *See video.
 - If they are verified - ship the order
 - If they are not - go to step **a.** below
 - If they paid with Braintree - check to see if the Liability has shifted. *See video.
 - If the Liability shifted shows true - ship the order

- If it did not - go to step **a.** below
- a.** Google search the name and the address to see you can find anything with the name attached to the address(Billing and Shipping)
- b.** See what the cost differences are between the two addresses (If one is 50K and one is 500K - send verification)
- c.** See if the shipping is a business, if so see if you can find the name on the business website

Automatically send verification if any of the below applies, the order is over \$500, and they have not ordered before

- Shipping to Chicago, Miami, or Canada
- Shipping is overnight
- Anything going to a freight forwarding company

do not send if billing is PO box and shipping is on the water for LL & LF only unless any of the other items above apply.

Customer Email - Formal Quote

Friday, March 10, 2023 11:00 AM

Overview

This document goes over how to process a customer requesting a formal Quote / Pro-forma

How often is this completed

- As necessary

Who completes this

Anyone that processes orders

Why this is important

Many companies and state counties have to have a formal quote/invoice. They cannot order without one.

Information / Steps

When a customer emails asking for a formal quote you will need to verify they provided an item, quantity, company name, and shipping address. If they did not provide all the information reach out and verify.

1. In QuickBooks create a new invoice under LAKELITE INC
2. Figure out the shipping cost through FedEx and round up \$50-\$100 (Ask HL if unsure)
3. Add the shipping charge to the invoice. In the description add what type of shipping is used (Example - Estimated FedEx International Shipping).
4. Save the quote as PDF
5. Email to the customer and notify them that a payment must be received before the order will ship. (Check, wire transfer, PayPal)
6. Delete the invoice in QuickBooks.

Side Notes:

- You cannot quote a customer higher than the "bulk discount" on the website
- Shipping for USA Domestic will qualify for free shipping
- Shipping for International will not qualify for free shipping

Discounts - Online Orders

Wednesday, March 15, 2023 3:15 PM

How often is this completed

- As necessary

Overview

This document goes over general guidelines for discounts

Who completes this

Anyone that processes orders

Information

Follow the below guidelines for when customer asks for a discount. Refunds can be processed for retroactive discounts when needed on quantity discounts.

- Items we do **not** offer a discount on - **Solar kits, Motors, Buoys, Sky Lights, out of stock / low stock items**
- Always attempt to not offer a discount, state we offer free shipping and no sales tax if not located in Indiana
- If a customer is begging or playing tough, stick to the standard discount offers below:
 - 1 - 9 lights = 5%
 - 10-50 lights = 10%
 - 50+ lights = 15%
- Max Discount should be 15% and only on large orders.

Discounts for repeat customers outside of warranty:

1-2 years 20%

2-3 years 15%

3-5 years 10%

5+ years 5%

See Bry if you feel the warranty is a rare one off situation that justifies a larger discount

For Ultra Bright Tech

More than 10 lights qualifies for 10%

Refund Information for Online Orders

Wednesday, March 15, 2023 4:40 PM

Overview

This document goes over Refund status on the Admin Panel

Information / Steps

Refunds will generally be through PayPal or Braintree. If you have a QuickBooks refund, you will need to give that to Heather to process.

ALWAYS document the account being refunded, the amount and the reason why. You will add these notes to the Admin Panel. If it is a QB refund heather will need this information for her to process.

Anytime you process a refund, check the admin panel to ensure your comments are saved and the dollar amount is correct. If all is good, change the status from refund, to archived, without notifying the customer.

*See refund tab for video and instructions

☐ Lake Lifter _ Large Orders Build in Progress Orders

Matthew Wilson

From: Bryanna LAKE LITE
Sent: Tuesday, January 9, 2024 4:28 PM
To: Jeff Martzall; Keith Henley; Daniel Boldt; Karrie Craft LAKE LITE; Matthew Wilson; Sales LAKE LITE
Subject: Lake Lifter / Large Orders Build in Progress Orders

Lake Lifter
_ Large O...

Good afternoon everyone,

Was chatting with Dan about how we used to give him the LF orders once they were placed on Greg's board. It would be helpful for shipping to go back to doing that so they can pull the items needed and is aware of what they will need to do ahead of time.

When processing orders that Greg must build, can we please start putting the printed order and shipping labels on Dan's keyboard. If we think it is a B/W or skid he will need the below information written on the pack slip.

- *Commercial or Residential Shipping
- *Business phone number
- *main email on the account
- *Contact name

Example:

SHIPPING NOTES FOR DAN
*Commercial Shipping
* 740-243-8116
*lakesdocks@yahoo.com
*Chad Crist

Once Shipping can ship the order, they must email the sales box letting us know the invoice shipped and we will then send the invoice with the correct shipping date. If B/W or Skid, they will bring the information into the office for us to give them an updated packing slip.

Any questions or concerns please reach out.

Let us know if we can help with anything in the future.

Best Regards,

Bryanna Wilcoxson

Parcel Select

Tuesday, October 11, 2022 3:27 PM

Packages qualifying for free economy shipping, should go USPS parcel select, if it is the cheapest option.

- This **excludes** large items, even if a motor qualifies for cheaper shipping via parcel select, it still MUST go FedEx. 15.12.12 / 14.14.14. Small boxes that are more 20 lbs.
- Warranties/Replacements - ship parcel select (unless we made an error or it was a DOA product, then use the shipping method the customer paid for)
- Samples

Shipping Tools

Thursday, July 15, 2021 2:59 PM

From <https://www.fedex.com/apps/myprofile/accountmanagement/?locale=en_US&cntry_code=us&wpro=true>

***Shipping Sheet is stored;

LAKELITE DATE > LAKE LITE INC > WEBSITE > Shipping Cheat Sheet New

- When there are shipping needs to be completed that are NOT connected with an online order from the Admin Panel, that can be processed through Webgility, we work with Stamps.Com, Fedex Ship Manager, and occasionally UPS. When processing Dealer orders and preparing for shipment, standard practice unless otherwise noted on the Dealer account with QuickBooks will be to pull the QuickBooks invoice number into the default Dealer shipping tool, FedEx Ship Manager. This will auto feed the invoice shipping details, where you then input commercial/residential shipping, with the corresponding shipping method, Ground or Home will be most common, then complete the shipping transaction by entering quantity of boxes, box sizes and weights. Once completing information and selecting "Ship" within FedEx Manager, tracking details and shipping costs are automatically exported to the QuickBooks invoice where you can adjust final pricing and complete order. FedEx Ship Manager will also be used to create needed "Call Tags" or Return labels that can be emailed directly to customers or printed to be sent with orders that items are needed back.

Stamps.com is utilized when mailing smaller warranty and replacement orders out to customers. Some Dealers will request the cheapest method, which most times will be Stamps.com, so long as package size doesn't exceed 7-10 lbs. Main use will be for Marketing Mailers, samples and Warranty Replacements for customers.

UPS is used only if specified directly by a current Dealer(usually their account code will be used for costs to be paid directly through them) and every once in a while an online customer will request due to only method that can be delivered. This shipping platform can only be accessed through the Microsoft Edge browser.

Order Processing

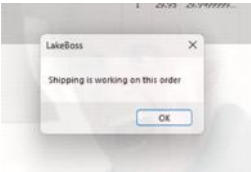

Tuesday, June 17, 2025 3:11 PM

- Overview
 - Review orders details
 - Address
 - Order contents
 - Add package details
 - Print labels
 - Schedule FedEx Express if needed

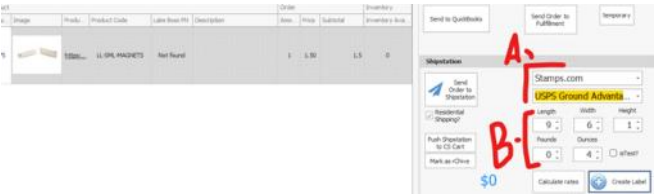

1. When we receive an online order, we need to process it as quickly as possible. Generally, customers are informed that most **orders submitted before 2pm EST will be shipped the same day** (barring orders that have a high volume or any workshop customization).
2. Double-click on the **order number** on the Lake Boss Online Order homepage to view the order.

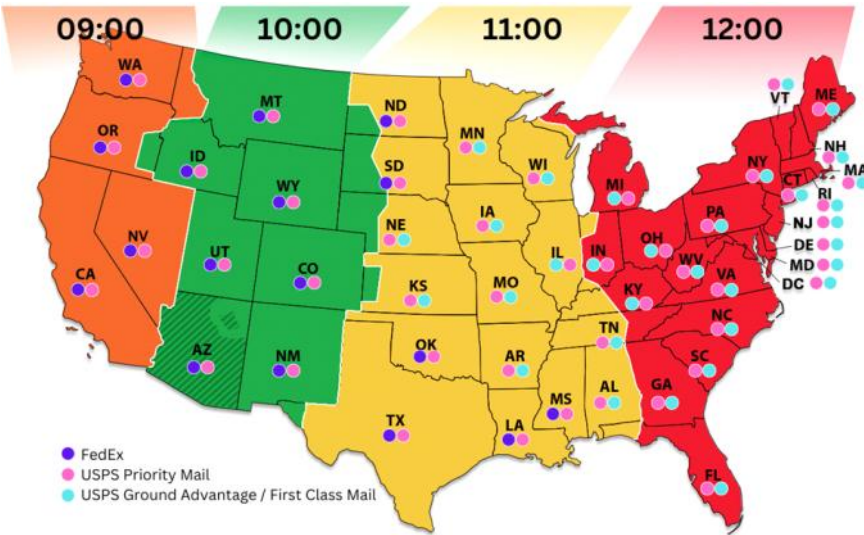

- a. If this window pops up, it means someone else is actively working on this order. Back out of the order so it isn't unintentionally processed twice.

- i. If the order is being worked on for an extended period, check with the processor for context before processing it.
3. First, review the order address – ensure that it is complete, and take note of any suite/apartment numbers. Also be mindful of partial addresses (e.g., **100** instead of **100 Industrial Drive**).
 - a. **If we are uncertain about the destination address, we need to call the customer to confirm the address before shipping it erroneously.**
 - b. Certain ordered items may need to be double-checked with the customer by the office staff (e.g., an epoxy motor bound for a saltwater destination, such as Florida). **Always ask if you're uncertain.**
 4. Referencing both the **Shipping Rules of Thumb (Appendix I)** and the shipping sheet, determine the box dimensions and weight of the order. Enter them into the **Length, Width, Height, Pounds** and/or **Ounces** fields (**B**).
 - a. If you're uncertain, ask the warehouse staff for a box weight.
 5. Depending on the box size and weight, select the appropriate carrier (**USPS** or **FedEx**) (**A**).

6. With the appropriate carrier selected, click **Create Label (A)**. This will print your label and post the tracking number in the **Shipping Labels window (B)**.
 - a. **If you have more than one label for an order**, re-enter the correct weight and dimensions and click **Create Label (A)**. **Repeat this step for each package** on the shipment.
 - b. Ensure that your printers are allocated correctly (**C**). For example, check that your FedEx printer is selected under the **FedEx Printer** dropdown – same with USPS. **This should not change unless you change it, but to save yourself extra steps, time, a label, and a headache, occasionally check these two dropdowns.**
7. Click on the **Send Shipment** button (**D**). This will send your order to ShipStation and mark the order as **Shipped** on the back end of the website (which also emails the customer, notifying them that their order is en route).

• **Appendix I: Shipping Rules of Thumb**

- Whatever shipping method the customer selects is what we use. There are some contextual exceptions:
 - Packages with any one dimension **over 14" in length**, or **weighing greater than 20 pounds**, need to be shipped via **FedEx**.
 - If a customer pays for USPS Priority and their order necessitates FedEx shipping, alert a member of the office staff so we can reach out to the customer, explain the change, and refund the difference.
 - FedEx** will **not** deliver to **Post Office (P.O.) boxes**. This requires calling the customer to change the shipping address or shipping method.
 - FedEx Express does not operate on weekends**. This means that a package **picked up Friday** afternoon will **begin its transit on the next Monday** (except for federally recognized holidays) and **be delivered on Tuesday**.
 - If a customer selects and pays for **FedEx Express** on such a day where the package **will not** be delivered the next day (weekends and federally recognized holidays), a member of the office staff needs to call the customer to inform them and adjust the shipping method and order cost as necessary.
- Barring special circumstances, **International Shipping will never be free**.
- FedEx does not account for weights less than a pound** (12oz. costs the same as 1 lb.; 2lbs. and 8 oz. costs the same as 3 lbs.). This is the **same with USPS Priority**.
 - USPS Ground Advantage** is to be used for anything under 1 lb. **The cost for a USPS Ground Advantage shipment changes every 4 ounces** (4, 8, 12, and 16+ oz.).
- For "free shipping" (AKA **Economy Shipping** as it states on the front end of the website) on orders, customer forfeit the choice of carrier and instead yield it to us. Reference the map on the next page to know which carrier we should use for each order. **The most cost-effective shipping method will vary from order to order, depending on case size, weight, and destination.**
 - If the order is **under 1 lb.**, always ship **USPS First Class** unless a different option was selected.
 - If the order **weighs more than 20 lbs.** or any one side of the package is **longer than 14"**, always ship **FedEx**.
- Anything you're not certain about? Ask! Get a second opinion; it's better to ship with confidence than need to issue a call tag because we weren't vigilant. **Effort up front is effort saved.**

- g. Enter your **Name (1)**, then company **Phone Number (2)**. Click **Schedule a FedEx Express Pickup (3)**, then enter the **number of packages**, the **total weight of the package(s)**, ensure the **pickup date** is selected for the current day, then change the **Ready Time** to **2:00 pm**, and the **Latest Time Available** to **4:00 pm**. Enter **SHIPPING DOORS** in the **Location (4)**.

- h. Click **Schedule Pickup (5)**. Review the information you entered on the confirmation page that follows.

• Appendix V: Web Order Statuses

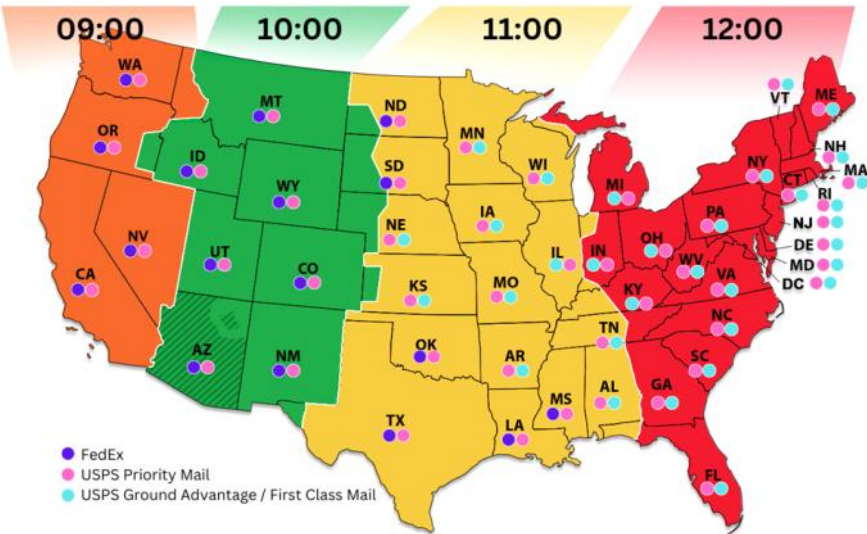

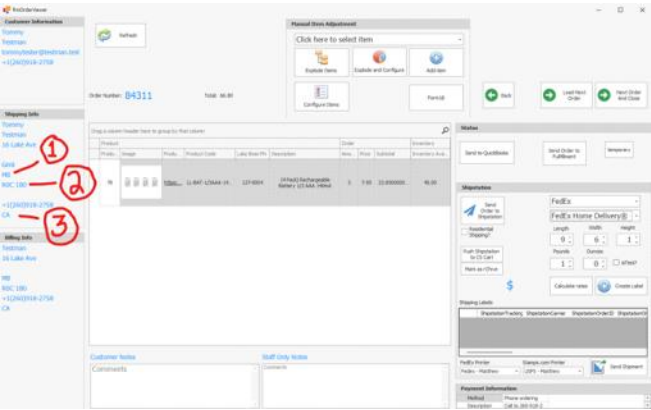

Status	Description	Action
Processed	Payment has been collected. Order is ready to be shipped.	Enter weight and dimensions, print a shipping label.
Shipped	A label has been created, data sent to ShipStation, email sent to customer.	Print invoice, include with label. Controller will convert to Sales Receipt in QuickBooks.
Open	Order is mostly complete (most likely a status set by PayPal)	Check for a transaction ID, confirm we have payment, then change to Processed .
IN PROGRESS	Part of the order needs built by workshop. Details entered on the Build Board on Monday.	Change to Processed when Workshop build is complete, change status on Build Board.
Quote	Customer entered a quote.	Reach out to customer offering to help. Make the sale if possible.
Archive	Archival reference at value greater than \$0.	No action required.
Saved quote	Archival reference at value of \$0.	No action required.
Full Refund	Order has been fully refunded and now has a value of \$0.	Change to Saved Quote .
Partial Refund	Order has been partially refunded and now has a value greater than \$0.	Change to Archive .
TEST ORDER	Order is being used for calibration.	No action required.
Incomplete	Order was partially submitted. Customer may have clicked "submit" too early.	Check for duplicate orders. Contact customer if necessary.
Canceled	Order has been cancelled.	Ensure order has been refunded. If so, change to Saved Quote .
Failed	Payment method failed.	Contact customer, complete the order. Submit as a new order if needed.
Waiting for Response	Office staff is waiting clarification from customer.	Contact customer. Change to appropriate status pending customer's directions (Processed , Full Refund , etc.).
Reserved	Customer's reservation for something we do not currently have in stock.	No action required until the product comes back into stock. Reach out to customer when product is in stock.
PICK UP ORDER	Order will be picked up by a local customer.	Change to Shipped after customer has picked up the order and signed a packing slip.

International Order Processing

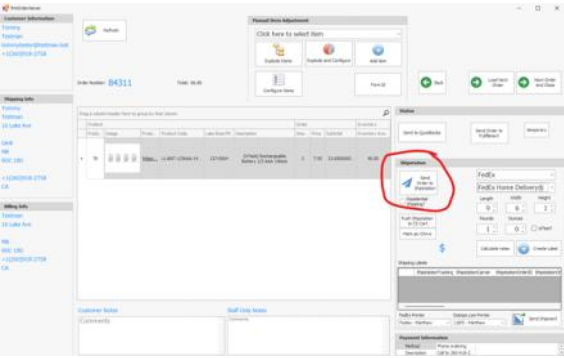

Tuesday, June 17, 2025 2:42 PM

- Overview
 - Identify an international order by its address
 - Load international order into ShipStation from Lake Boss
 - Add package details
 - Input customs information
 - Schedule FedEx Express if needed

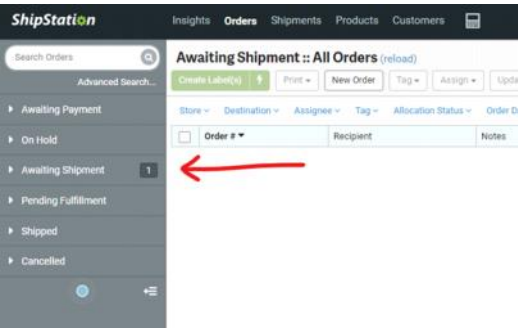

1. When processing orders with Lake Boss, you may run into **international addresses**. These have specific processes that need to be completed before shipping. Identify these addresses by (1) **unfamiliar state abbreviations** (e.g., NB or QC), (2) **non-US ZIP code formats** (e.g., 4 digits for Australia or 6 alphanumeric characters for Canada), or the (3) **country abbreviation itself** (CA for Canada, GB for Great Britain, etc.). See below:

2. Lake Boss, for now, does not process international orders (specifically the manual entry of customs information – more on that later). All we need to do in Lake Boss is **Send the Order to ShipStation**. See below:

3. After logging into [ShipStation](#), click the **Awaiting Shipment** bar to view the order(s) awaiting shipment.

4. Click on the **Order #** to view it.

5. First, **Customs Declarations** will need to be added. Click **+ Add Declaration**.

6. Fill out the **Description**, **Quantity**, **Value**, **Harmonization Code**, and (country of) **Origin**. **A shipping rate will not be quoted until customs declarations have been entered**. Please note that the **Quantity** is based on **selling units** (e.g., a 4-pack of Dock Dots is only 1 selling unit).

- If this is for an order, **Package Contents** is **Merchandise**. If this is for a warranty, change **Package Contents** to **Gift** to avoid taxes and/or duties being charged to the customer.
- The **Total** (value) will **automatically be calculated**.
- The (country of) **Origin** will **always be China**.
- If **more than one Declaration is needed** (e.g., a motor and solar kit shipping together), click **Add Declaration** and fill out the **Description**, **Quantity**, **Value**, **Harmonization Code**, and (country of) **Origin**.

Description	Unit Value	Harmonization Code
SAFETY MARINE LIGHTS	ACTUAL RETAIL VALUE	9405.41.8440
BOAT LIFT LED CANOPY LIGHT	ACTUAL RETAIL VALUE	9405.41.8440
BOAT LIFT MOTORS	ACTUAL RETAIL VALUE	8501.32.2000
BOAT LIFT CHARGING KIT	ACTUAL RETAIL VALUE	8541.90.0000
CHARGE REGULATOR	ACTUAL RETAIL VALUE	9032.89.2000
BATTERY STORAGE BOX	ACTUAL RETAIL VALUE	3923.10.9000
BUOYS	ACTUAL RETAIL VALUE	9405.41.8440

7. Enter the **Package Weight**, select the **Service**, enter the **Size** (dimensions), then select whether we are prepaying **Duties/Taxes** or not (**USPS only** – see **A.**).

- USPS is slower, but **we have the option to prepay the taxes and duties on packages under 4 lbs.** Packages over 4 lbs. can still be shipped via USPS, but the taxes and duties are at the customer's expense. FedEx is faster, but there are no options for us to prepay taxes and duties, for which the customer is then charged.

FedEx Express Info

Monday, January 24, 2022 1:22 PM

FedEx overnight will pick up on Friday but they do not deliver on Saturdays. The package will be delivered on Monday.

FedEx Overnight HAS to be scheduled ASAP

- Mon- Thurs Schedule for **2pm-4pm**. Friday Schedule 1pm-3pm
- If it has not been picked up by 3:45 let Heather or Keith know (they will have to transport it to a drop off point)
- If you have an order come through after 2pm, you need to let Heather/Keith know because they will need to take it.

FedEx Express has to be scheduled for any **overnight or International** orders. **Exception is Canada.** We have a brokered deal with FedEx for Canada packages.

Go to www.FedEx.com

Select "Schedule a Pickup"

The screenshot shows the 'Schedule a Pickup' form on the FedEx website. The user is logged in as 'Jeffrey'. The form is titled 'Pickup' and has tabs for 'Schedule a Package Pickup', 'Schedule an LTL Freight Pickup', and 'My Pickups'. The 'Schedule a Package Pickup' tab is selected. The form is divided into three main sections: 1. Pickup Address, 2. Package Information, and 3. Complete Pickup. In the '1. Pickup Address' section, the user has entered 'United States' for Country/Territory, 'LAKEUTE INC' for Company, 'Bryanna' for Contact name, '105 W SIMON ST' for Address 1, '46763' for ZIP, 'LAOTTO' for City, 'Indiana' for State, and '2609182758' for Phone no. The '2. Package Information' section has a checkbox for 'Schedule a FedEx Express Pickup' which is checked. The '3. Complete Pickup' section has a 'Schedule pickup' button. There is a 'Clear all fields' link at the top right of the form.

The screenshot shows the 'Schedule a Pickup' form on the FedEx website, specifically the '2. Package Information' section. The user is logged in as 'Jeffrey'. The form is titled 'Pickup' and has tabs for 'Schedule a Package Pickup', 'Schedule an LTL Freight Pickup', and 'My Pickups'. The 'Schedule a Package Pickup' tab is selected. The form is divided into three main sections: 1. Pickup Address, 2. Package Information, and 3. Complete Pickup. In the '1. Pickup Address' section, the user has entered 'United States' for Country/Territory, 'LAKEUTE INC' for Company, 'Bryanna' for Contact name, '105 W SIMON ST' for Address 1, '46763' for ZIP, 'LAOTTO' for City, 'Indiana' for State, and '2609182758' for Phone no. In the '2. Package Information' section, the user has checked 'Schedule a FedEx Express Pickup'. Below this, there is a section for 'Package information for FedEx Express pickup' with fields for 'Total no. of packages' (1), 'Total weight' (15 lbs), 'Pickup date' (01/24/2022), 'Ready time' (1:30 pm), and 'Latest time available' (4:30 pm). There is also a field for 'Location of packages or special instructions' with the value 'Shipping Door'. The '3. Complete Pickup' section has a 'Schedule pickup' button. There is a 'Clear all fields' link at the top right of the form.

Information / Steps

UPS is only used when specified by a dealer (usually they want to use their account to pay for the shipping cost). We do not have a daily pickup, so if the dealer wants to use UPS they will need to schedule the pickup or they will need to pay an additional fee for us to schedule the pickup.

We generally ask the dealer if they have a FedEx account or would like us to use ours due to cheaper shipping.

If a customer requests UPS we will ship via UPS and we will pay the pickup fee.

See the video to help with the processing steps.

Stamps (USPS)

Friday, March 24, 2023 2:10 PM

Overview

This document goes over
Stamps (USPS) Manager

Stamps
Example

A screenshot of the USPS Stamps Manager web application. The interface is divided into a left sidebar with navigation links (Print, Postage Wizard, Stamps, Envelopes, Packages, International, Orders, History, Reports, Contacts, Supplies, Account, Learning Center) and a main content area. The main area is titled 'Package Details' and includes fields for Return Address, Delivery Address, Service (Parcel Select Ground Large Pack), Weight (0 lbs. 1.0 oz.), Dimensions (0 L 0 W 0 H), Tracking, Add'l Options, Insure For, Mailing Date (03/28/2023), and Customs. It also shows a 'Total Cost: \$0.00' and a 'Print Label' button. The 'Print Details' section on the right shows the label preview and options for printing (Zebra/Eltron Type, Standard 4x6 label).

Information / Steps

We mainly use stamps to create labels for warranty replacements, market mailers, and samples. There are a few dealers that ask to ship the cheapest route and we will use stamps for them as well.

Stamps will always grey out once you click into it. As you hover over an area or enter into the area it will show back up. See the video to help.

For any packages .9 lbs. or under you will use Frist Class Mail.

For anything between 1-19 lbs. you will use whatever is cheapest. Generally that will be Parcel Select.

For anything over 20 lbs. or anything larger that 15*12*12 / 14*14*14, you will want to use FedEx.

Dealer Orders - International

Monday, March 7, 2022 11:40 AM

After entering the invoice number you will see the below page. You must change the country to the corresponding country.

FedEx Dispute Overnight Charges

Thursday, September 8, 2022 10:17 AM

****MAKE NOTE** - We MUST process the dispute request within 15 days of the invoice being generated.**

Customer will contact us stating they either did not receive the package or the package was delivered late.

-Refund the customer's money and note the Tracking Number

The screenshot shows the FedEx Order #39208 details page. The order total is \$24.00 for 'Lake Lite - Solar Marine Solutions' shipped on 08/31/2022. The customer information is Amy Martin, amartin_72@yahoo.com, with IP address 67.246.224.210 and phone 2077125351. The shipping address is 86 Gateway Commons Drive, Gorham, Maine 04038, United States. The billing address is the same. The product is '2pk COLOR LEDs For Solar Dock Post Lites' (CODE LL-LED-WARMWHITE) with options for '2pk WARM White LED's'. The price is \$4.00 per unit, 6 units shipped, totaling \$24.00. The totals section shows a subtotal of \$24.00, FedEx Standard Overnight of \$33.56, and a refunded amount of \$33.56, resulting in a total of \$24.00. A customer note mentions '644' and a staff note mentions 'Order Shipped on 09/01/2022. Via FedEx Standard Overnight Tracking Number is: 277471464506'. A barcode is visible at the bottom.

-Watch for invoice with the overnight fee (See below on how to access)

-Process dispute for the charge (see below process)

-Send screenshot to Heather

Step 1 ↓ Click Jeffrey - View & Pay

The screenshot shows the FedEx website homepage. The header includes the FedEx logo and navigation links for Shipping, Tracking, Design & Print, Locations, and Support. The main banner features a FedEx carrier and the text 'Ship, manage, track, deliver'. Below the banner are three buttons: RATE & SHIP, TRACK, and LOCATIONS. The TRACK button is highlighted. A tracking ID input field and a TRACK button are visible. The footer includes icons for a person, a truck, a warehouse, a warning sign, and a return arrow. A sidebar menu on the right lists: My profile, Administrative tools, Email preferences, Address book, View & pay bill (highlighted), Reporting, Open an account, and LOG OUT.

Step 2 ↓ Click the Date button until it lists the newest date first

USPS Claim

Thursday, October 6, 2022 11:39 AM

Received a call from a USPS representative with new support contact information for within US. If you have an issue with an international package, you will have to reach out to the below and they will redirect you to the International side.

Will add the information to OneNote, however, figured I would still send it.

USPS Select
888-707-7226
uspsselect@usps.gov

File a Domestic Claim[®]

[Current Claim](#) / [Saved Claims](#) / [Claims History](#) / [FAQs](#) >

You may file an indemnity claim for the following:

- Insured Mail
- Collect on Delivery (COD) Items
- Registered Mail[®] items with insurance
- Priority Mail Express[®] items

Each mail service has a different time period for filing. If your item arrives damaged or with missing contents, you may file a claim immediately.

Find information on [International Claims](#).

Step 1: Search for Package

Tracking Number:
9405511202526882018687

Ordering FedEx Labels

Monday, February 7, 2022 3:36 PM

1. Go to https://www.fedex.com/ordersupplies/wols.do?method=initOrderSupplies&locale=en_US
 - a. You may need to sign into FedEx first and follow the above link again
2. Verify that the Active Account in the top right corner's dropdown menu is **Lake Lite-4123**.
3. FedEx's part number for the 4" x 6.75" labels that we use is **156148**. Search **156148** in the filters, and click **Find Supplies**.

The screenshot shows the FedEx Order Supplies website. The top navigation bar includes links for Shipping, Tracking, Design & Print, Locations, and Support. The user is logged in as Jeffrey Martzall, and the active account is Lake Lite-4123. The page displays a welcome message and a list of past orders. Below this, there is a section titled "Unbox the latest:" with a list of questions and answers regarding ordering timing, amount, and variety. The main section is titled "1. Select Supplies" and shows a search for "156148". The search results are filtered to "Envelopes (5)". The first result is "Envelope with built-in pouch" (Part No. 155475) with dimensions 9-1/2" x 12-1/2" and a capacity of 1.5 lbs. The second result is "FedEx® Envelope (without built-in pouch)" (Part No. 155477) with dimensions 9-1/2" x 12-1/2" (24.13 cm x 31.75 cm) and a capacity of 1.5 lbs. Both results have a "Quantity" dropdown set to 0 and buttons for "Add to cart" and "Add to favorites". A red circle highlights the "Find Supplies" button in the left sidebar.

Order Supplies My Orders **Supplies Cart(0)** My Profile Print Help **Active Account:** Lake Lite-4123

Welcome, Jeffrey Martzall! 5 Past Order(s)

Browse our packaging options, select the items that you need, and order your supplies online. Need supplies immediately? Stop by a **FedEx Office®** or **FedEx World Service Center®** location where limited quantities are available.

Unbox the latest:

- Timing: Can I wait to order since I currently have enough in inventory?
- Amount: Should I order less based on my shipping forecast?
- Variety: Do I really need many different sizes of packaging?
- At FedEx, we're committed to helping build a sustainable future and that extends to our packaging. To build on our commitment, you'll begin to see some new offerings in our packaging portfolio, including kraft packaging which saves water in production. It's how we'll keep delivering what's next while making supply chains smarter for everyone.

Warranty Process - QB

Tuesday, June 17, 2025 2:25 PM

1. If this warranty is for a retail/web customer, ensure that the warranty **SALES ORDER** is created under the **WARRANTIES** account*.
 - a. *If the warranty is for a dealer's customer (e.g., BoatLiftandDock.com, NuCraft, etc.) then create the warranty **SALES ORDER** under the according account.
2. Always leave the default addresses for **WARRANTIES** blank to lower the chances of shipping errors. Enter the shipping address in both **BILLING** and **SHIPPING** fields.
3. Enter the customer's/recipient's name in the **PO #** field for easy, at-a-glance reference.
4. Enter the product information as normal – check the **SKU**, **quantity**, **description**, and inventory **SITE** as **Main/Unassigned**.
5. **Zero out the price** of the product(s).
6. Enter the **carrier**, **tracking number**, **shipping box size**, and **original order number** (if possible) in the text field rather than as a line item.
7. **SAVE** the **SALES ORDER**, then **CREATE INVOICE**. **SAVE** the **INVOICE** and communicate the tracking information to the customer/recipient.

The screenshot shows a software interface for creating a Sales Order. The interface includes a top toolbar with various icons, a header section with dropdown menus, and a main content area with a table and form fields. Handwritten green numbers 1 through 7 are placed over specific parts of the interface to correspond with the steps in the list above.

1. Points to the **CUSTOMER_JOB** dropdown menu set to **WARRANTIES**.

2. Points to the **SHIP TO** address field.

3. Points to the **PO #** field.

4. Points to the **DESCRIPTION** column header in the table.

5. Points to the **PRICE EACH** column header in the table.

6. Points to the **DESCRIPTION** column header in the table.

7. Points to the **CREATE INVOICE** button in the toolbar.

Replacement Guide

Wednesday, September 14, 2022 12:01 PM

Warranty for all 3 Color Changing Lights

Load test fail

0-5 years – replace
5+ years – 10%

LED Failure

0-2 years – replace
2-3 years – \$40
3-5 years – \$60
5+ years – 10% discount

Water in the battery Compartment

0-2 years – replace
2-3 years – \$40
3-5 years – \$60
5+ years – 10% discount

****If a replacement has already been sent and customer is stating the troubleshooting is not working, get the "defective" light back for testing before sending replacement****

****Ship via Parcel Select unless the below applies****

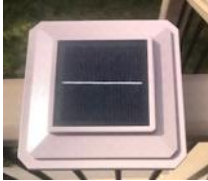

- An item was shipped that is defective/ DOA or missing pieces (within a week or two of shipping)
- Large item - anything over 14.14.14/ 15.12.12 or small box over 20 lbs

Returns for Testing/ Repairs

Customer reaches out stating they are having issues, depending on cost, we will send replacements with a call tag.

1. Add detailed notes to AP
2. Create Warranty Sheet, include notes from AP as well as any pictures
3. Add basic notes to the excel (Only if call tag is sent, include tracking number)
4. Once the light is received, add notes in AP that say - Date - rec'd and sent for testing.
5. Once testing is completed, you will note the results in AP **and** on Monday.com.

The original lights where not UV resistant. When the turn pink or different colors send replacements.

Wednesday, September 15, 2021 11:54 AM

Returns for Testing/ Repairs

1. Add detailed notes to AP
2. Sent return information
3. Add basic notes to the excel (include tracking number if return label is sent)
 - i. Once testing is completed, you will note the results in AP **and** on Monday.com.

Cc 'Karrie Craft'

Hello,

Please see attached our return policy for the return of the RCG install kit.

Karrie- please wave the restocking fee, install kit has not been touched.

Thank you,

Heather Lothamer
Office Manager

Replacement Hardware

Monday, October 3, 2022 12:26 PM

Key https://lakelite.com/cart_buy_link/1669042745

When it comes to the bases, they can only purchase the whole unit. We do not sell the base sizes individually.

For the light cover/seal/screws, there is a hidden product on LL to purchase spares from, you can find it on the admin panel.

See the link below.

All you will need to do is specify on the order, once printed, which battery cover/seal/screws are needed.

https://lakelite.com/cart_buy_link/1676994018

 Replacement Light Battery Cover/Screws/Seal  CODE: LL-BATTERY-RP \$1.00  8  \$8.00			

Testing 3 Lights / Batteries Information

Friday, January 7, 2022 2:25 PM

When testing lights you will need to do the follow tests

1. Load Test
A load test is used to test the amount of amps it takes to charge a battery through the solar panel
2. Test the batteries
We test the batteries to make sure the sensor in the light did not allow it to go under the allowed level. (Generally 2.9 is the shut off) If the battery is lower than 2.800 trash it.
3. Test the LED bulbs
Go through the brightness levels then the 3 colors to verify they all come on.

Batteries

3.3 ↑ - full
2.9 - does not have enough power to turn light on
2.8 ↓ - is trash
0000 - charge then test again.

SML Battery

1.359 ↑ Goal
Anything between the goal and fail needs charged
1.200 ↓ Fail (Trash)

SML

For SML you need to look to see if the wires have been pulled out from the light and battery

Use the voltage meter to verify the light's voltage is higher than 1.2V **Is this with or without light? Example – In the light, it tested as 2.09volts. In complete darkness, it tested at 1.006. You can only test with the light, as the sun is what is producing the power.**

Watts times the amps equal the charge. **The spec sheet states the watts is 0.45. So, I would take 0.45 x the amps the light tested as? Example - the light amps tested as 0.17, so I would multiple that by 0.45? That would equal 0.0765. Is there a conversion I should be using to turn that number (0.0765) into the charging rate? Volts x Amps = Watts. So if the light is testing at 2.09v x .17 amps = .35 watts Which if the spec sheet is actually correct that the watt is .45, then the amps should be .2153ish. That just effects the charging speed though, has nothing to do with if the light will come on or not. Also, who knows if .45 is the correct wattage for that light or just something Jeff made up for the website.**

When checking the amps, you are just verifying that the light has amps **What does the amps mean when it comes to the SML? How does this help determine if a light is bad / good? The amps and volts just determine how fast it recharges the battery. If you get not volts or amps at all then the light is toast.**

What else can be done to test Solar Marine Lights? They are pretty straight forward, they either work or they don't. 99% of the time it has to do with those small red/black wires. Because they are so small they can get pinched easily which will cut the power off.

Braintree Refunds

Tuesday, March 21, 2023 2:08 PM

Overview

How to process refunds on Braintree

How often is this completed

- As necessary

Who completes this

Warranty for 3 Color Changing Lights

Wednesday, March 15, 2023

4:33 PM

Overview

This document goes over the replacement guidelines for all 3 color changing lights.

How often is this completed

- As necessary

Who completes this

The person that processes warranty claims

Information / Steps

Over the last few years we have had some defects with the 3 color changing lights. Load test failure, saltwater failure, LED failure, fixture color changing due to lack of UV resistance, and moisture in the battery compartments are the most common issues. Below is the guide for replacements.

Load test fail & Saltwater

0-5 years – replace

5+ years – 10%

LED Failure

0-2 years – replace

2-3 years – \$40/unit

3-5 years – \$60/unit

5+ years – 10% discount/order

Water in the battery Compartment

0-2 years – replace

2-3 years – \$40/unit

3-5 years – \$60/unit

5+ years – 10% discount/order

****If a replacement has already been sent and customer is stating the troubleshooting is not working, get the "defective" light back for testing before sending replacement****

Warranty Information

Thursday, March 16, 2023 2:43 PM

Overview

This document goes over product warranty guidelines

Information / Steps

Solar Lights = 1 year

Solar Panels = 15 years

Batteries = 1 year

Lake Lifter Aftermarket Motor = 2 years

Lift Tech Motors = 2ish years through Lift Tech

Lake Lifter DD and PWC - 3 years

Lake Lifter Winch Boxes - 5 years

Serial # - QI Report

Tuesday, December 23, 2025 9:11 AM

07112025-

090002

- 1: anything that comes out of the workshop receives a QI report (example attached).
- 2: the QI report is taken with the product to the warehouse for shipping.
- 3: The warehouse will include the QI report with the paperwork to process the order.
- 4: Write any identifying factors on the QI report (customer/dealer name, order #, etc.):

Date 11-21-25

Assembler/Quality Inspection Report

Product: Battery Box Large Vert Dealer: LF1087-PAUL RICE
Assembler: CG/eshy Inspector: RC

TEP	DESCRIPTION	ASSEMBLER	INSPECTOR
1	Check fasteners and hardware	CO	RC
2	Verify cable connections		

5: The order processor will scan the QI report, save it to the location below, and rename the QI report after the serial number (MMDDYYYY-HHMMSS):

Location: \Documents - LakeFileServer\Workshop\Quality\QI Reports

07112025-090002.pdf

Ensure that the filename is the exact same as the serial number itself - do not add or remove anything. If we need to search the folder for a QI report by serial number, altering the naming convention will unintentionally exclude the report file from a search.

6: add the serial numbers from the QI report to the invoice and attach each corresponding QI report for each serial number to the invoice (example below).

7: after scanning the QI report and saving it in the above specified location, give the QI report to Kevin.

Example:

New Dealers / Maintenance

Thursday, September 23, 2021 2:12 PM

As our DBAs continue to expand and grow, we will be growing with our Dealer Program. As we receive new Dealer Applications, you will need to enter them into QuickBooks, add them to the appropriate Store Locator, and email their Welcome/Pricing Packet.

Steps

1. Check website - if no website - verify address using Google
 - a. Commercial / Residential
2. Build in Quick Books
 - a. Special notes → Dealer type (Dealer or Preferred) and Shipping type (Comm / Res)
3. Send welcome email with PDF pricing packet
4. Add to Store Locator (website LOGO)
5. Check our website to verify they are now on there
6. Save App in the File Folder

Credit App

Tuesday, October 7, 2025 10:38 AM

Overview:

This document is for dealers who want Net30 day terms (wherein payment is due 30 days past the invoice date).

How often is this completed :

- Once

Why this is important:

To avoid having prepaid accounts - having a dealer on prepay slow down the order processing as we have to wait for payment before shipping.

Who requests this:

Any dealer wanting Net30 or "seeking terms."

Information / Steps:

1. Send the dealer the credit app.
 - a. Must have official signature!! - Do not approve without a signature.
 - b. If this is a brand new dealer and the value of the order is **greater than \$5,000**, we will want to have Kevin fact-check their references.
2. Attach the completed form to QB - change their terms to Net30:

Dealer Credit Processing

Wednesday, September 22, 2021 4:06 PM

Determine the invoice that the credit will be applied to. Generally the Dealer will call or email. Example below

45809
45829

Hello I received the following above invoices today on my desk and had a question on 45809. It looks like we ordered the wrong part, and then sent it back, and should have a credit on our account for this.
The part that was ordered wrong and sent back was LL-SP-15w-12v

And we then re-ordered 20w-12v

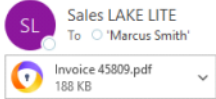

Can you resend the invoices with the credits on them, and get this all straightened out, so that I can put them in the system, and get it paid out this week.

Be below video will show you how to process the credit.

Applying
Credits

After the credit has been applied save the invoice as a PDF and email the dealer a copy.

Good afternoon,

The credit has been applied to Invoice 45809 and the updated invoice is attached.

Let us know if we can help with anything else in the future.

Best Regards,

Bryanna Wilcoxson

Administrative Assistant | 260-918-2758 Ext. 402

[LAKE LITE](#) | [ULTRA BRIGHT](#) | [LAKE LIFTER](#)

105 W. Simon St., Laotto, IN 46763

- If a dealer sends back product you will apply a credit to their account and send an emailed copy of it.
- The credit does not get applied unless the company asks for it to be applied to a certain invoice.
- Do not tell a dealer about a credit unless they directly ask about their credit balance.
- If a dealer calls asking about credits - send them their current credit balance from this year unless they ask for the total amount.
- If a credit is old try not to notify them about it. That is on them to have records of.

Creating a credit

Thursday, February 16, 2023 1:32 PM

Let the dealer know that they will still have to pay the shipping cost.
Once the item is received, confirm it is still in new condition.
Open QuickBooks and follow the steps on the video below.

Untitled_
Feb 16, 2...

Dealer Pricing - Welcome Email

Wednesday, September 1, 2021 1:17 PM

Attached is our 2022 Dealer Pricing. We evaluate the pricing yearly and we will send new pricing by the end of each year. I set your account up with net term 30 days and payment needs to be via check. If we have to use the credit card information on file, a 4% fee will apply.

Please send purchase orders to sales@lakelifter.com or heather@lakelifter.com

Invoices will be sent by e-mail unless you request them to be sent via regular mail.

If you list any of our products online, they must be set at a minimum of our MSRP listed on the attached document. We also have a strict no selling of our products on Amazon or EBay.

Let me know if you have any questions and **WELCOME** to Lake Lifter.

Thank you for your business. We truly appreciate you!
Best Regards,

Bryanna Wilcoxson

Dealer Phone Orders

Tuesday, January 17, 2023 3:47 PM

If a dealer calls in to place an order over the phone, please take the order down and email it to the dealer for confirmation. Doesn't have to be anything formal, just send an email like the sample below.

Many dealers I personally have asked to email their order in, never sent the order. Jeff wants us to start taking the order down and emailing it to the dealer to confirm.

Heather's Construction Order 1/17/23

QTY 1 : 20w-24v panel

Qty 5: 24v HD Regulator

****Please confirm the order and provide a PO # if you would like one on the order.****

Phone Order 2/8/2023

***Please review the items below and Quantities**

***Advise of PO and Shipping address**

Creating Dealer Account

Friday, March 10, 2023 11:43 AM

Overview

This document goes over Creating Dealer Accounts

How often is this completed

- As necessary

Who completes this

Heather determines

Why this is important

Our Dealer program is the base of our company.

Information / Steps

Once an application is submitted you will complete the below steps. A video is below to help guide you through the process.

1. Create new Customer
2. Enter all information from Application
3. Do a Google search on the shipping address provided to determine if it is Residential or Commercial.
4. Add note to the account stating their pricing and type of shipping address
5. Add information to the store locator
6. Save the application to the Dealer App folder
7. Send Welcome email with startup information.

- Dealers are generally set up as Net 30. HL needs to approve changes to different terms
- Dealers that are repeat offenders to paying late will be put on Prepaid terms.

Dealer Accounts Page 95

Overview

This document goes over how to set up a contractor on the Admin Panel.

How often is this completed

- As necessary

Why this is important

To get money...

Who completes this

Matthew / Bryanna

Information / Steps

When a contractor fills out a form to receive the 20% offered we need to complete the below steps for them to be able to log in and order on the store front with the discount.

If the Quote has a phone number

1. Call and go over the order with the customer.
2. If they do not answer leave a voicemail.
3. Send an email.
4. Add notes to AP with date, your initials, and actions taken.
5. Mark as a Saved Quote and allow it to notify the customer.

If the Quote does not have a phone number

1. Send an email.
2. Add notes to AP with date, your initials, and actions taken.
3. Mark as a Saved Quote and allow it to notify the customer.

Preseason Order

Friday, October 4, 2024 4:07 PM

Email Template

Thank you for sending over a preseason order (future ship order). The order will ship on or just before the requested date. Attached is a copy of the sales order for your reference. Please note, the shipping and freight costs are not included on the sales order and will be added once the order is ready for shipment, as these costs may vary.

Additionally, any changes to the order, shipping date, or cancellations may be subject to fees. If you would like to add items, please provide a separate purchase order.

We appreciate your continued partnership. If you have any questions or need assistance, please don't hesitate to reach out.

Online Order - Quotes

Thursday, August 7, 2025 2:02 PM

Overview

This document goes over Online Order Status - Quote

How often is this completed

- As necessary

Who completes this

Anyone that processes orders

Why this is important

To prevent losing an order

Information / Steps

An online order quote status comes up when a customer in checkout but decides to wait to order. Generally they want a discount, have questions, or wants to hold off on the order.

If the Quote has a phone number

1. Call and go over the order with the customer.
2. If they do not answer leave a voicemail.
3. Send an email.
4. Add notes to AP with date, your initials, and actions taken.
5. Mark as a Saved Quote and allow it to notify the customer.

If the Quote does not have a phone number

1. Send an email.
2. Add notes to AP with date, your initials, and actions taken.
3. Mark as a Saved Quote and allow it to notify the customer.

Solar Post Caps Faqs

Monday, November 1, 2021 4:15 PM

- Standard lights turn on at dusk and off at dawn (turns on in darkness and off in daylight).
- Light will also turn OFF when the battery level gets too low to protect them from draining all the way to ZERO amps.
- **If battery gets EXTREMELY low, then it "may" accidentally switch to the OFF mode, meaning it does NOT come on after recharging the next day unless the magnet is used in "darkness" to switch it back up to level 1-2-3-4-5-6-7.**
- 7 brightness levels, plus OFF.
- Levels are: 1-2-3-4-5-6-7-OFF.
- A short pass of the magnet across the light's solar panel, will trigger the light to increase to the next brightness level. (1-2-3-4-5-6-7-OFF)
- To change LED color, hold down the magnet in the "sweet-spot" for 5 seconds.
- Changeable LEDs are White, Amber & Biue

485 to 490 Nano meters

White in Kelvins is 3600-4000

2500-3500 warm white (yellow/orange)
3500-4000 medium (3 color changing white)
4500-6000 cool (blue white)

KEY SOLAR LIGHT FACTORS

- Solar light products should be placed in as much direct sunlight as possible for best performance.
- Shading can **REDUCE** the recharging performance by as much as 50-80%.
- Solar light run time is based on:
 - Angle of sunlight for recharging
 - Sun/Cloud conditions for recharging
 - Duration of sunlight for recharging

SEASONAL SUN ANGLES

Summer:
• Solar panel 100% power
• Long daytimes & fully recharged batteries

Spring/Fall:
• Solar Panel 50-75% Power
• Medium daytimes & less than fully recharged batteries

Winter:
• Solar panel <50% Power
• Short daytimes & minimal recharged batteries.

Example Tree to show possible shading scenario during low sun angles
Winter performance can be up to 6X less than summer performance

BRIGHTNESS SETTINGS

"Some" of our Products have one or more brightness settings: If so, please consider:

Max Run times: Based on the battery being fully recharged. If batteries are not fully recharged, the run times will be significantly less.

SUN: Consider geographic location and sun conditions.

Performance: Difference in performance between summer & winter performance can be 6X less than summer performance. (Varies with solar light)

Brightness Setting: Brighter settings use significantly more power than lower settings and if the light is being used seasonal or year-round.

SEASONAL HIGHS

BATTERY CHARGE RUN TIMES

- 100% Hrs
- 80% Hrs
- 60% Hrs
- 40% Hrs
- 20% Hrs
- 10% Hrs
- 5% Hrs
- 2% Hrs
- 1% Hrs

NOTE: Run times are estimated based on actual conditions. Varies significantly with actual conditions. Varies with geographic location, battery condition and weather conditions.

SUN & CLOUD COVERAGE

Note: The solar panels recharging power declines rapidly with poor sun conditions

Note: Lower recharged capacities results in lower solar light run times

SEASONAL DAYLIGHT HOURS

Note: During summer months, charging hours are twice that of winter months.

Example Data: Indianapolis, IN USA

A general idea of battery & solar recharging conditions through the year

SEASONAL AVERAGES

BATTERY CHARGE RUN TIMES

NOTE: Run times are estimated based on actual conditions. Varies significantly with actual conditions. Varies with geographic location, battery condition and weather conditions.

BRIGHTNESS SWITCH

Wave the magnet over the solar panel at NIGHT until you find the activation area which changes the brightness level. This operation only works at NIGHT or in absence of light.

Make a quick up & down motion over this area to change between brightness levels & OFF.

NOTE: moving too slowly may activate the magnet switch multiple times going through multiple levels at once. A quick motion will help.

4-Season Rated ! Adjustable Power & Run Times.

LED BRIGHTNESS LEVEL	RUN TIME BASED ON BATTERY CHARGE LEVEL				
	100%	80%	60%	40%	20%
7	30	8	6	4	2
6	13	30	8	5	3
5	35	12	9	6	3
4	20	36	12	8	4
3	29	23	17	11	6
2	50	40	30	20	10
1	100	80	60	40	20
OFF	OFF	OFF	OFF	OFF	OFF

5 NOTE: RUN TIMES ARE BASED ON A FULL CHARGE. MANY FACTORS MAY PREVENT A FULL CHARGE SEE BELOW

- TESTING:** Place entire light in a dark room. Light should turn on, if not, swipe the magnet over the solar panel until light turns on.
- Run times will vary significantly based on factors such as: Sun Exposure, Season, Angle of Sunlight, Geographic Location, Shading, Installed Location/Position, Battery Condition, and most importantly, the **Brightness Setting** in comparison to the yearly season.
- The following run times should only be used as a general reference and are not guaranteed. Consider your local environment
- Lower brightness settings use less power and leave more reserve power for cloudy days where less recharging takes place.

COLOR CHANGING SWITCH

Change illuminating colors on the fly!

Hold or place the magnet on top of the solar panel activation area for at least 5-seconds: After 5 seconds the illuminating color will change: Repeat process to cycle between White / Blue / Amber LED illuminating colors.

If process did not work ensure the magnet is close enough to the activation area. Operation only works at NIGHT or in absence of light.

After desired color is achieved: use a quick up/down motion over the activation area to set the desired brightness level & run time shown in the previous step.

TIPS & TRICKS: If you purchased multiple units place multiple magnets together creating a stronger magnet. This will help increase the size of the activation area and allow you to activate the switch further from the light!

Troubleshooting- Light Not Turning On

Wave the magnet over the solar panel at night until you find the activation area which changes the brightness level.

Make a quick up & down motion over this area to change between brightness levels and OFF.

NOTE: moving too slowly may activate the magnet switch multiple times going through multiple levels at once. A quick motion will help!

CHANGING LED COLORS
Hold the magnet over the activation area for 5 seconds until the LED color changes.

Note: After a few days of low/no sun light or if the light is on high

We recommend only using high power setting #7 for short periods of time. Ideal power setting is between 2-5. Setting #1 is recommended for winter use

NEW MAGNET SWITCH OPERATION

Troubleshooting- **Light Not Turning On**

Wave the magnet over the solar panel at night until you find the activation area which changes the brightness level.

Make a quick up & down motion over this area to change between brightness levels and OFF.

***NOTE:** moving too slowly may activate the magnet switch multiple times going through multiple levels at once. A quick motion will help!*

CHANGING LED COLORS

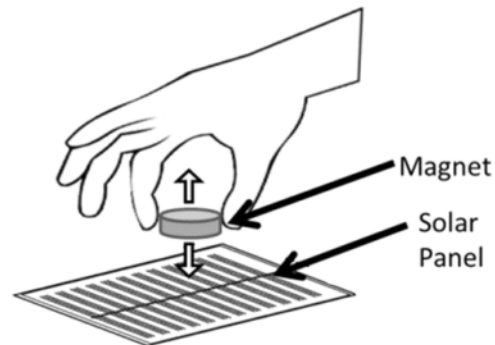

Hold the magnet over the activation area for 5 seconds until the LED color changes.

Note: After a few days of low/no sun light or if the light is on high power setting #7, the light may turn to **OFF** mode.

Reactivate the light by waving the magnet over the activation area again.

We recommend only using high power setting #7 for short periods of time. Ideal power setting is between 2-5. Setting #1 is recommended for winter use

NEW MAGNET SWITCH OPERATION

Attachments	 Magnet Troubles...

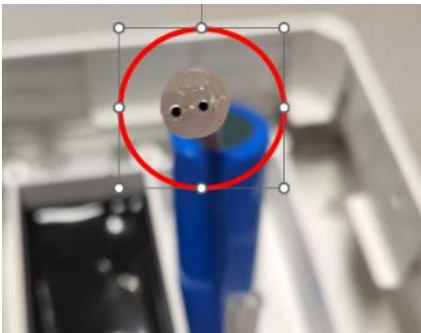

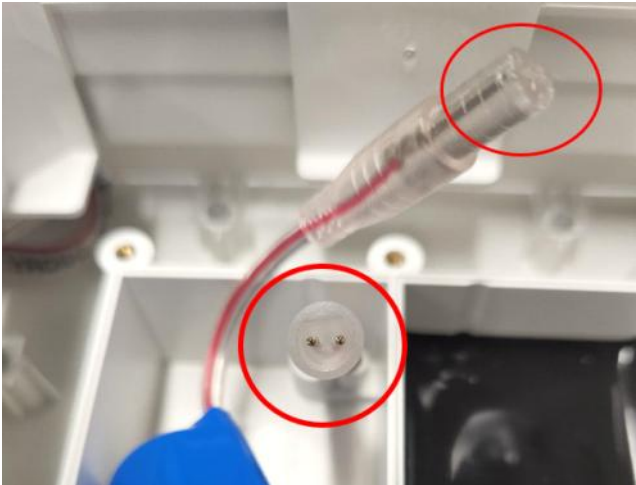

Hello,

Step 1: Once the battery is connected, put the solar panel up to a bright light and then into a dark room. Then slide the magnet across the top of the panel slowly to attempt to activate the light out of OFF mode. ***See Attached***

If step 1 doesn't work attempt Step 2. ***VERY IMPORTANT TO PUT THE SOLAR PANEL AGAINST A BRIGHT LIGHT AFTER CONNECTING THE BATTERY, THEN INTO A DARK ROOM***

Step 2: Take a battery from a known working light and put it into the one not working. Then put the solar panel up to a bright light and then into a dark room. If no light comes on, while in the dark room, slide the magnet across the solar panel to reactivate the light.

Thank you,

Post Cap Quick Guide

Cap	Battery	Retail Cost
5-1/2 in. x 5-1/2 in. Solar Post Cap for <u>Azek/Trex/Wood</u> UB-550AZ-X	LiFePO4 Solar Rechargeable Battery 2000mA UB-BAT-IFR22650E-2000MA	\$9.95
5-1/8 in. x 5-1/8 in. Solar Post Cap for <u>TimberTech</u> UB-500TT-X	LiFePO4 Solar Rechargeable Battery 1400mA UB-BAT-IFR18650E-1400MA	\$8.95
5 in. x 5 in. Solar Post Cap – 3 LED Colors UB-500GE-X	LiFePO4 Solar Rechargeable Battery 1400 Ma UB-BAT-IFR18650E-1400MA	\$8.95
4-1/2 in. x 4-1/2 in. Solar Post Cap for <u>Trex</u> UB-450TX-X	LiFePO4 Solar Rechargeable Battery 1400mA UB-BAT-IFR18650E-1400MA	\$8.95
4 in. x 4 in. Solar Post Cap – 3 LED Colors UB-400-GE-X	LiFePO4 Solar Rechargeable Battery 1400mA UB-BAT-IFR18650E-1400MA	8.95
4 in. x 4 in. Solar Post Cap – White LED UB-350-400-X	2 Pack AA 1.2v 1200mA Rechargeable Batteries LL-BAT-AA-1200MA	\$5.00
3.5 in. x 3.5 in. (4" x 4" Wood Post) Solar Post Cap – White LEDs UB-350-400-X	2 Pack AA 1.2v 1200mA Rechargeable Batteries LL-BAT-AA-1200MA	\$5.00

IMPORTANT:

Waterproof Seal

1. Make sure the silicone seal is properly in position
2. Tighten ALL screws fully. Then GO BACK and double check EACH screw is fully tighten.

NOTE: when the screws are fully tightened the silicone pad will be squeezed and protruding outward on all sides.

Not fully tightening a screw may result in a small air gap where air will come inside and condense into water.

To ensure the light is waterproof you must make sure it is fully Air-Proof

4 in. x 4 in. Solar Post Cap Light for Vinyl & Wood Posts - White LEDs

Wednesday, September 15, 2021 10:48 AM

Retail Cost: \$54.95

Sku: UB-350-400-X-W

X would be color. W for wood

4 in. x 4 in. Solar Post Cap Light for Vinyl & Wood Posts – White LED

Fits Post Sizes:

- Vinyl Post (Actual 4 in. x 4 in.)
- Wood Post (Actual 3-1/2 in. x 3-1/2 in.)

Key Features & Benefits

- Available in White, Black or Brown
- 10-140 Hour Run Time**
- 7 Adjustable Brightness Levels & White LEDs
- 12 Ultra Bright LEDs
- 5-35 Lumens
- Replaceable Rechargeable Batteries
- 1 Year Warranty

Common Issues:

1. Light not working
2. Battery has died / or is connected wrong
3. Work for 1-9ish months then die (possible load test failure)
4. Flickering generally means the battery is very low in voltage. Recommend to her to turn them down to level one or in the off mode during the winter months.

Tech Support Steps:

1. Weather, Sunny (DIRECT SUNLIGHT, NOT THROUGH A WINDOW)
2. Battery (Connected?, connected wrong?)
3. Slide mag over top to see if in off mode?
4. Is it in the warranty period?
 - a. if yes, send a replacement (when needed - call tag)
 - b. If no, offer to send it back for testing - not interested ask HL for discount code

Sending Call Tag? Seek HL approval

Yes

1. Repeat Offender / Multiple replacements send
2. Stating multiple lights have issues
3. High \$\$\$
4. Seeing a trend with an item
5. Crazy issues
6. GRUMPY people

NO

1. Low \$\$\$
2. Light is DOA (Exception would be high \$\$\$)

LIGHT CHARACTERISTICS	
Light Source	12 Ultra-High Intensity White LEDs
Lumens Output	5-35 Lumens* (Varies with Brightness Levels)
Available LED Colors	White
Light Mode Options	Constant *Variable Brightness
Visible Range	100-200m+ (Depending on Settings)
Horizontal Divergence (Degrees)	360*
Vertical Divergence (Degrees)	180*
LED Life Expectancy (Hours)	>100,000 hrs
ELECTRICAL CHARACTERISTICS	
Circuit Protection	Integrated/Overcharge/Over Discharge/Constant Current
Nominal Voltage	2.4v Battery, 4v Solar
Power/Brightness Levels	7 Levels & off, User Adjustable with Magnet
Autonomy (hours)	10-140 hrs* (On Full Charge) *Varies with brightness setting
Temperature Range	14-158° Fahrenheit
SOLAR CHARACTERISTICS	
Solar Module Type	Tempered Glass + Monocrystalline Cell
Power (watts)	0.8 watts
Solar Module Efficiency (%)	18% Super High Efficiency Cells
POWER SUPPLY	
Battery Type	NiMH
Battery Size	2 Pcs AA 1.2V
Battery Capacity (mAh)	1200 mAh
Nominal Voltage (v)	2.4 V (2pc 1.2V AA Batteries)
Battery Service Life	1-3 Years (Varies with local Environment)
Battery Service Access	Yes: User Changeable/Replaceable
PHYSICAL CHARACTERISTICS	
Body Material	High Performance ASA
Lens Material	Bayer UV Stabilized Poly Carbonate
External Lens Design	Smooth/Clear
Internal Lens Design	N/A
Waterproof Rating	IP 68
Base Options (Post Sizes)	4.00" x 4.00" - Vinyl
	4.00" x 4.00" - Wood (Actual Measurement 3.5" X 3.5")
Height	2.55" / 65 mm
Width/ Width	5.5" X 5.5" (140mm)
Weight	1.10 lbs / 0.50 kg

4 in. x 4 in. General Solar Post Cap Light for Vinyl Posts – 3 LED Colors

Fits Post Sizes:

- Vinyl Post (Actual 4 in. x 4 in.)

Key Features & Benefits

- Available in White or Black
- 10-140 Hour Run Time**
- 7 Adjustable Brightness Levels & 3 Color LED Options
- 36 Ultra Bright LEDs
- 5-50 Lumens
- Replaceable Rechargeable Batteries
- 1 Year Warranty

Common Issues:

- Light not working
- Battery has died / or is connected wrong
- Work for 1-9ish months then die (possible load test failure)
- Flickering generally means the battery is very low in voltage. Recommend to her to turn them down to level one or in the off mode during the winter months.

Tech Support Steps:

- Weather, Sunny (DIRECT SUNLIGHT, NOT THROUGH A WINDOW)
- Battery (Connected?, connected wrong?)

Replacement Guide

Wednesday, September 14, 2022 12:01 PM

Warranty for all 3 Color Changing Lights

Load test fail

0-5 years – replace
5+ years – 10%

LED Failure

0-2 years – replace
2-3 years – \$40
3-5 years – \$60
5+ years – 10% discount

Water in the battery Compartment

0-2 years – replace
2-3 years – \$40
3-5 years – \$60
5+ years – 10% discount

****If a replacement has already been sent and customer is stating the troubleshooting is not working, get the "defective" light back for testing before sending replacement****

****Ship via Parcel Select unless the below applies****

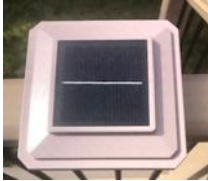

- An item was shipped that is defective/ DOA or missing pieces (within a week or two of shipping)
- Large item - anything over 14.14.14/ 15.12.12 or small box over 20 lbs

Returns for Testing/ Repairs

Customer reaches out stating they are having issues, depending on cost, we will send replacements with a call tag.

1. Add detailed notes to AP
2. Create Warranty Sheet, include notes from AP as well as any pictures
3. Add basic notes to the excel (Only if call tag is sent, include tracking number)
4. Once the light is received, add notes in AP that say - Date - rec'd and sent for testing.
5. Once testing is completed, you will note the results in AP **and** on Monday.com.

The original lights where not UV resistant. When the turn pink or different colors send replacements.

Gentleman Called asking About Converting from a 10W 12V to potentially 20W 24V, wanting to know if he can just purchase the Panel and not a whole kit. I told him I would pass the questions along and someone would contact him.

- Can he use the gear from the 10W 12V for a 20W 24V? Or will he have to buy a whole new kit?
- Will he need to go to a 30W? He stated he thinks he would like to do the 20W.
- Will he need a voltage controller?

12v or 24v are not interchangeable. He would have to buy a new panel.

If he has our mounting arm, then he would only need the panel + regulator. All 24v panels do require the charge controller.

Standard Light FAQs

Monday, November 1, 2021 3:57 PM

- Standard lights turn on at dusk and off at dawn (turns on in darkness and off in daylight).
- Light will also turn off when the battery level gets too low to protect them from draining all the way to ZERO amps.

Buoy

Do not have timers or remotes.
CNC Top allows you to turn on and off

Building or renovating a new dock?

Consider installing a safer and more cost-effective DC system instead of traditional AC power. The benefits of DC power are overwhelming. High voltage electricity/AC power is expensive, time-consuming, requires multiple permits and inspections, and leads to the potential for dangerous shock hazard. Furthermore, future regulations may ban AC power on docks altogether.

Advantages of DC power systems include:

- Safety, Safety, Safety....DC Power eliminated shock hazards!
- Cost-effective
- Quick & Easy set-up of a complete DC motor system & solar charging kit within hours
- No AC electrical permits or inspections required
- Compliance with new regulatory bans on AC Power

2500-3500 warm white (yellow/orange)
3500-4000 medium (3 color changing white)
4500-6000 cool (blue white)

Battery Information

Thursday, December 9, 2021 1:23 PM

NiMh (Nickel-Metal Hydride) over NiCAD (Nickel Cadmium)

Need a wall charger? <https://a.co/d/i9CFbXw>

NiMh

PROS - better all around, best for environment, fast to charge, larger storage capacity, doesn't forget over time how much of a charge it can hold

CONS - does have a fast shelf discharge, cuts power off suddenly for voltage (jeff likes this as it is to keeps our lights from flickering when battery gets low)

NiCAD

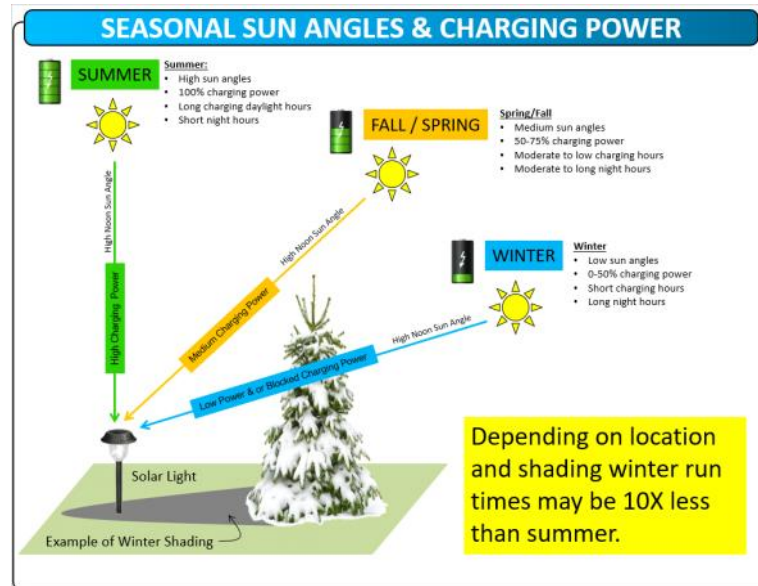

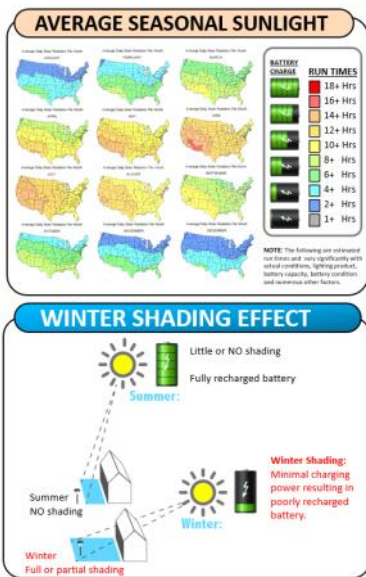

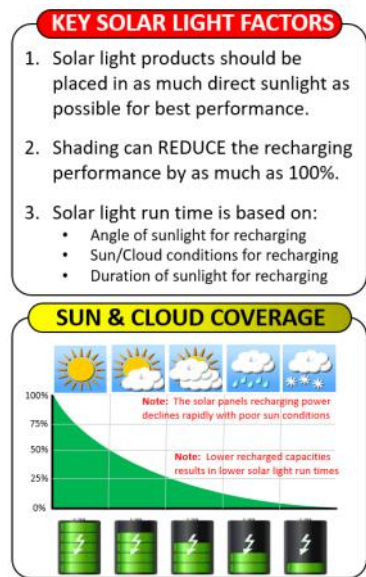

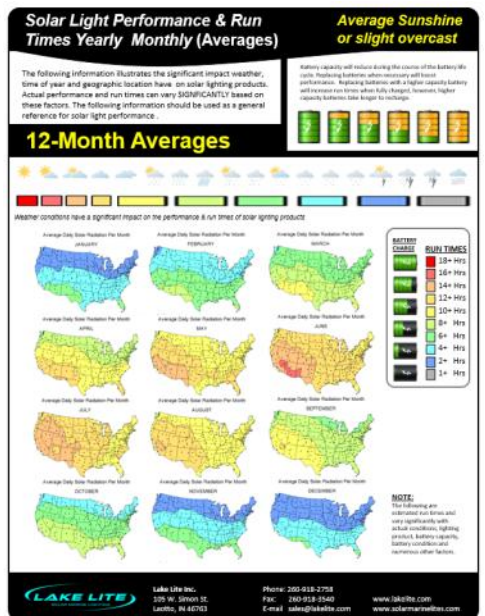

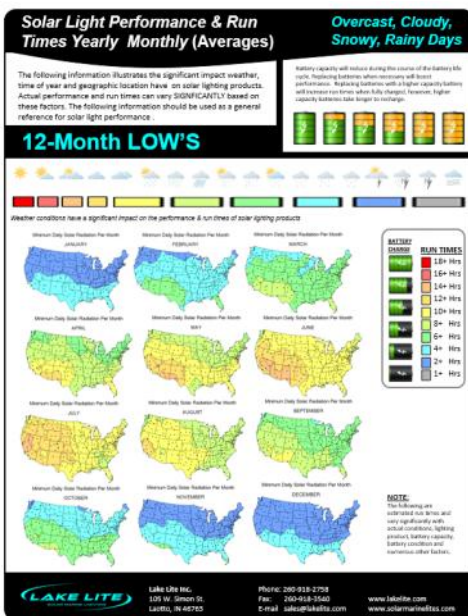

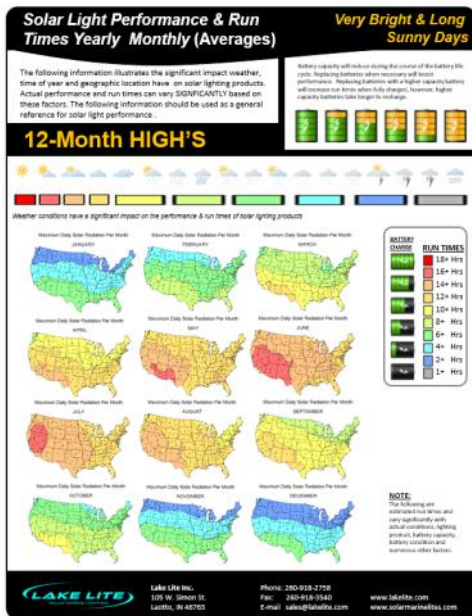

PROs - does better in the colder temps, doesn't shelf discharge fast, recharges charges faster.

CONS - contains toxic metals bad for environment, not as powerful

All in all – recommend NiMh!!!!

Cadmium is a RCRA 8 heavy metal, strict EPA regulations, so best to use Nickel based batteries since it's considered a micronutrient for plant nutrition. So based on environmental considerations, above is good information to share with customers.

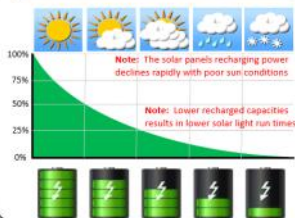

- For blue batteries mA (1000, 1400, 2000, 2800 & 3000) 2.6 or lower on 3.2v batteries are dead- throw away in dumpster
- **Lithium battery for boat lift - why not worth \$\$**
 - Lithium batteries with our regulator will never allow the battery to reach its maximum capacity. It will charge to rough 95% and stop.
 - They are OVER priced, You will spend \$500-1000 on a single lithium battery for 10 years of service vs \$80 for 3-5 years.
 - Recommend AGM battery.

KEY SOLAR LIGHT FACTORS

- Solar light products should be placed in as much direct sunlight as possible for best performance.
- Shading can REDUCE the recharging performance by as much as 50-80%.
- Solar light run time is based on:
 - Angle of sunlight for recharging
 - Sun/Cloud conditions for recharging
 - Duration of sunlight for recharging

SUN & CLOUD COVERAGE

SEASONAL SUNLIGHT

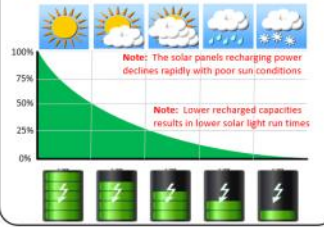

SEASONAL DAYLIGHT HOURS

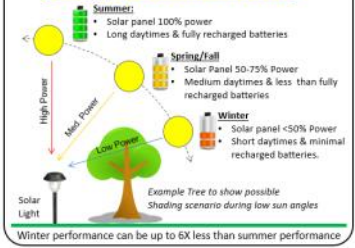

KEY SOLAR LIGHT FACTORS

- Solar light products should be placed in as much direct sunlight as possible for best performance.
- Shading can REDUCE the recharging performance by as much as 50-80%.
- Solar light run time is based on:
 - Angle of sunlight for recharging
 - Sun/Cloud conditions for recharging
 - Duration of sunlight for recharging

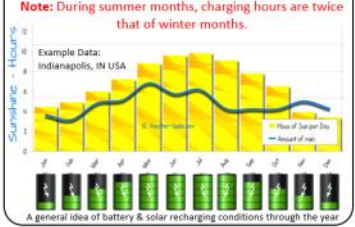

SUN & CLOUD COVERAGE

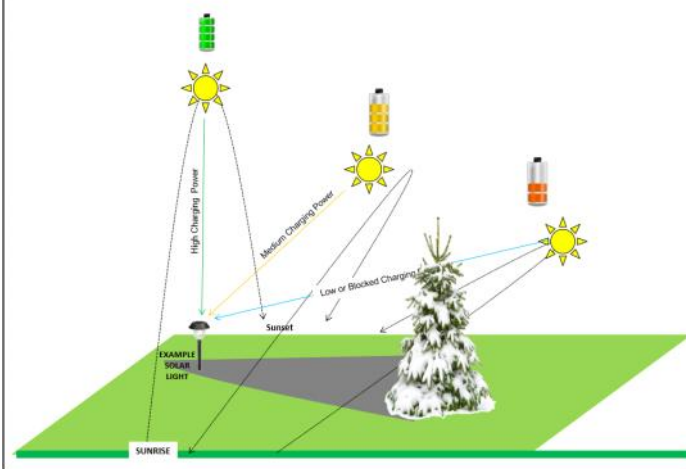

SEASONAL SUN ANGLES

SEASONAL DAYLIGHT HOURS

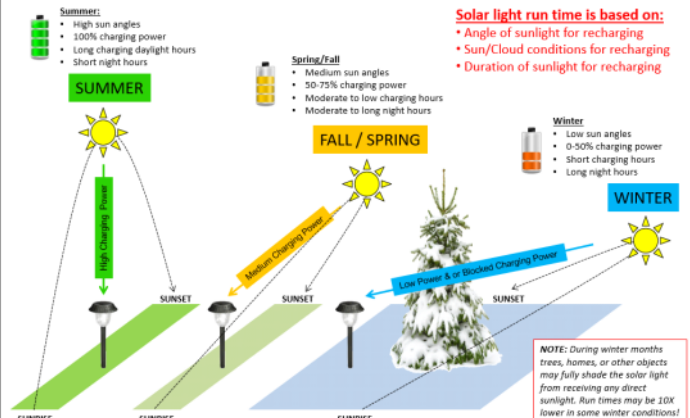

SEASONAL SUN ANGLES DRAMATICALLY REDUCE PERFORMANCE

SEASONAL SUN ANGLES DRAMATICALLY REDUCE PERFORMANCE

The run time performance of solar light is determined by the amount of direct sunshine it receives during the daytime and more importantly the angle of the sunlight it receives. During winter months the sun is much lower in the sky. Even on a SUNNY winter day your solar light will be charging at less than 50% of maximum charging power at high noon. That also means that anytime before noon or after noon the solar panel will be charging even less due to lower angles of sunlight. Obstacles such as trees & houses may block direct sunlight during winter months when the sun's path is at low angles in the sky.

Batteries:

Allow the batteries to charge in a full day of **DIRECT SUN LIGHT** before removing the batteries **PRIOR** to dark.

Store the batteries, screws, battery cover and any additional parts in a dry location at room temperature.

Solar Light:

Clean solar panel with a non-abrasive cleaner, such as Windex or car wax (Novus or Meguiar's), along with a cotton cloth.

Clean underside of solar light to remove any dirt, film, cobwebs and moisture.

Store the light in a dry/warmer location.

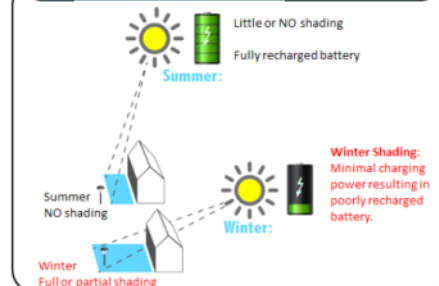

Note: Extreme cold weather can dramatically reduce the life expectancy of your rechargeable Ni-Cd or Ni-Mh batteries.

Remove batteries or switch your light to OFF mode, if your light has the option, before storing indoors.

Preparing Your Solar Light For Winter

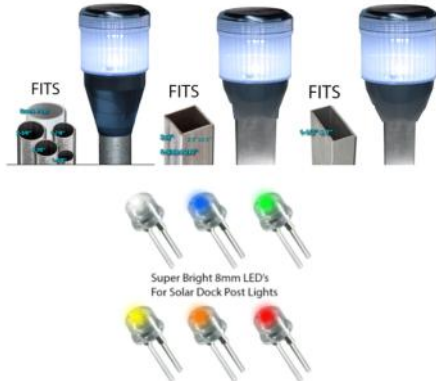

Prolong the life of your light and batteries by preparing them for winter

WINTER SHADING EFFECT

Solar Dock Post Lights 2-pk Round/Square/Rectangle

Fits

Round Posts (Brock, 2-3/8", 2", 1-7/8" or 1-5/8")
 Square Posts (2"x2", 2.5"x2.5" or 5-Sided 2"x2")
 Rectangle Posts (1-1/2"x2" or Brock)

Key Features & Benefits

- Available White, with 6 other LED bulb options
- Replaceable tops for easy upkeep
- 16-20 Hour Run Time
- 1 Ultra Bright LED (Customizable LED options)
- 12 Lumens
- Fresh Water Rated
- Replaceable Rechargeable Battery (AA 1000 mA)
- 1 Year Warranty

Common Issues:

1. Led failure
2. New batteries (screws for the cover are a #2)
3. Bulb not cut or in backwards

1.

Tech Support Steps:

1. For Led failure (get HL approval) Send new top
2. For batteries
 - a. If in warranty - send batteries
 - b. Not in warranty - ask HL or send them a link for new batteries
3. Bulb - ask if they cut the bulb legs to be the same length
 - a. No - Try cutting the legs then inserting the bulb
 - b. Yes - ask if them to try to turn the bulb the other way and see if that works
 - c. If neither of those options work - Ask HL (Could be LED failure or bad bulb)

- 6.
- 7.
- 8.

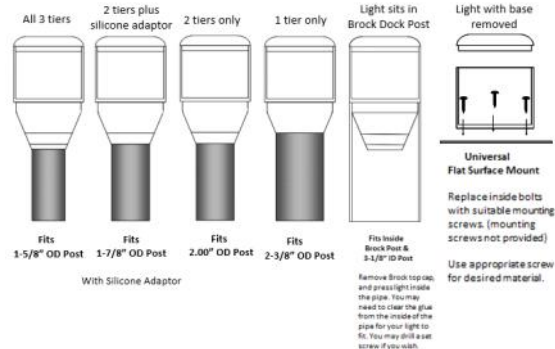

LIGHT CHARACTERISTICS	
Light Source	1 Ultra High Intensity LED
Lumens Output	12 Lumens* (Varies with Color)
Available LED Colors	White, Blue, Green, Red, Yellow, Orange, & Warm White
Light Mode Options	Constant
Visible Range	300m-500m+ Depending on Settings
Horizontal Output (Degrees)	360°
Vertical Divergence (Degrees)	N/A
LED Life Expectancy (Hours)	>100,000 Hrs
ELECTRICAL CHARACTERISTICS	
Circuit Protection	Integrated
Nominal Voltage	1.2v
Autonomy (hours)	16-20 hrs* (On Full Charge)
Temperature Range	-10 to 70°C
SOLAR CHARACTERISTICS	
Solar Module Type	Multicrystalline or Monocrystalline
Power (watts)	0.60 watts
Solar Module Efficiency (%)	17-18%
POWER SUPPLY	
Battery Type	High Grade NiCd or NiMH - ECO Friendly
Battery Size	1 x AA
Battery Capacity (mAh)	1000 mAh (Suggested: larger)
Nominal Voltage (v)	1.2v/ Battery
Battery Service Life	1-3 Years (Varies with local Environment)
Battery Service Access	Yes: User Changeable/Replaceable
PHYSICAL CHARACTERISTICS	
Body Material	UV Stabilized Polycarbonate
Lens Material	UV Stabilized Polycarbonate
External Lens Design	N/A
Internal Lens Design	360° Lenticular
Waterproof Rating	IP 65
Mounting	Fits Over Post (See Attached for Sizing)
Height	6 inches
Width/Diameter	3.5 inches
Weight	0.75 lbs
OPTIONS	
Custom Options, Sizes, & Colors	Please Contact
Custom Hardware & Mounting	Please Contact
* Information Subject To Change Without Notice	

Make the post size chart more use friendly:

Smallest adaptor 1 5/8" OD - has all three tiers
 Second Adaptor w/ Silicone 1 7/8" OD
 Second Adaptor 2" OD
 Largest Adaptor 2 3/8" OD or 3 1/8" ID (brock dock fits inside)
 Flat mount option also

Round Dock Post Lights

Round Dock Post Lights come with 3 tier tiers on the light and a silicone adaptor

LL-SDL-X

Solar Deck Light

Fits Docks, Boat Houses, Boardwalks, Decks, Marinas, and other mountable surfaces

Key Features & Benefits

- Available with White and Blue LEDs
- 18 Hour Run Time**
- 3 Ultra Bright LEDs
- 8-10 Lumens
- Replaceable Rechargeable Battery (1 – AA 1200mA)
- Fresh & Salt Water Rated
- Additional Custom Mounting Hardware Available
- 1 Year Warranty

Replaceable Rechargeable
Batteries (2-AAA 400mA)

Tech Support Steps:

1. Standard troubleshooting
 - a. Batteries installed correctly?
 - b. Batteries charged in direct sun for 8 hours?
 - c. Swap batteries from known working light?
2. Non Lake Lite batteries
 - a. Must be rechargeable
 - b. Must be 1.2v batteries (1.3+v will fry the circuit board)
 - c. They can get a larger mA (that is just the storage capacity)
3. Hardware (2 needed for each light)
 - a. Stainless steel screws (so they don't rust)
 - i. If customer wants to purchase elsewhere, we recommend # 10x1"
 - b. Wing nuts are for pass through decking only
 - i. Thru-Flow is the only odd ball (all others are universal wing nuts)

Common Issues:

1. Customers forget to take the plastic film off the solar panel!!! - this causes the film to corrode onto the panel over time and the sun can no longer reach the panel to charge the battery.
2. Battery compartment will be missing the battery spring connector (warranty replace)

3. 2+ year old lights have pointy tip screws for the battery cover - the new styles have flat tip screws. Pointy tip screws pushed too far down into the circuit board causing spotty connection and poor light functionality. (replace screws only no light)
 - a. This issue has almost become extinct but all in all, have the customer take the battery cover off, uninstall and reinstall the batteries, let solar panel see light and then darkness, if light comes on replace screws.

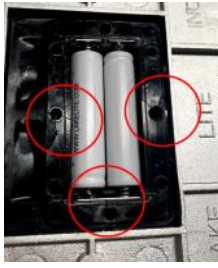

4. One LED of the 4 will fail or one will be way less bright as the others (warranty replace in under 2 years old)

5. Cracking inside the battery compartment (2+ years old light) Plastic we used back in the day wasn't very strong, so when the customer over tightened the screws down it cracked the threading where the screws attached. This then causes the cover to not hold on tight and water to get inside the compartment. (see HL for these warranty claims)

LIGHT CHARACTERISTICS	
Light Source	4 Ultra-High Intensity LED
Lumens Output	8 Lumens
Available LED Colors	White or Blue
Light Mode Options	Constant
Horizontal Output (Degrees)	180° + Horizon
Vertical Divergence (Degrees)	+45°
LED Life Expectancy (Hours)	>100,000 Hrs
ELECTRICAL CHARACTERISTICS	
Circuit Protection	Integrated
Nominal Voltage	2.4v
Autonomy (hours)	16-20 hrs (On Full Charge)
Temperature Range	14-158° Fahrenheit

Instructions
-LL-SDD-D...

Solar Dock Dots 1-3/8"
Lake Lite Inc

Solar Dock Dots (4-pk) (Also available as singles)

Fits Decks, Docks, Boardwalks, Pathways, Stairs, Patios, Pilings, Posts and more (1-3/8" Drill Bit and can be installed to anything)

Key Features & Benefits

- Available in White, Blue, Amber, Red, Pink, Green & Ice Blue LEDs
- 16-20 Hour Run Time**
- 1 Ultra Bright LED
- 2-3 Lumens
- Replaceable Rechargeable Battery (1-1/3 AAA ~~140mA~~ 140mA)
- 1 Year Warranty

Common Issues:

1. DOA battery - top reason for calls, dots are rarely defective
2. Cust don't know how to get the battery cover off (use a penny or flat head screw driver)
3. Cust take the battery cover off then have no clue how to get the silicone seal out.... Tell them to push down on one side and the other side will pop up.
4. Light is running during the day
 - a. brand new (warranty replace)
 - b. 1+ years tell them to take the battery out of the light for a few hours to allow the light to fully discharge all voltage in the circuit board. Then reinstall battery at dark, see if that solves the issue.
5. Light is flickering or not staying on long.
 - a. Might need to try to gently pull the battery spring out with a flat head screwdriver

Tech Support Steps:

1. Standard troubleshooting
 - a. Batteries installed correctly?
 - b. Batteries charged in direct sun for 8 hours?
 - c. Swap batteries from known working light?
2. Non Lake Lite batteries - Hard to find locally for this size
 - a. Must be rechargeable
 - b. Must be 1.2v batteries (1.3+v will fry the circuit board)
3. 1 3/8th" hole needs drilled. Mostly recommended for wood applications.
 - a. Some customers have drilled out holes in their rocks slabs, concrete and metal decks (no clue how they drilled threw those). They have the right to do so, the only concern is if they ever decide to move and take them with them or decide they don't want solar lights, they have holes that are not easily patchable like wood is.

LIGHT CHARACTERISTICS	
Light Source	1-Ultra-High Intensity LED

Example

Thank you for your lights! I continually have to take the batteries out of one to get it to keep lighting... still every couple weeks...

Are you taking the batteries out for the light to power back on or are you replacing the batteries weekly?

It stops working after a week or so... Taking them out, readjusting them, and putting them back in make them work for another week or so... then I have to do it again after a few days, to make them work again... really weird? Any ideas you can share?

Try pulling the spring on the battery compartment out more, if the spring is too crunched it will cause spotty connections. A simple bump of the light can cause the battery to adjust and lose good connection. Loosening the battery spring will cause the battery to sit tighter inside the compartment.

Common Issues:

1. Customers forget to take the plastic film off the solar panel!!! - this causes the film to corrode onto the panel over time and the sun can no longer reach the panel to charge the battery.
2. The on/off button can get stuck. Causing the light to not come back on after pushed.
3. Buttons
 - a. Old OLD styles had an on/off button & brightness button
 - b. Some old styles only had a brightness button
 - c. New Styles sold within the last year only have an on off button.
4. Brightness level has changed in 2021 to a super bright led bulb (cust may call with that complaint)
5. LED Lights blinking
6. Bad batteries
7. Only one brightness level
8. Cannot change the LED bulbs
9. If wanting to put on a post smaller than 3.5, they have to make an adapter or go to different light (Dock Post Lights)

Tech Support Steps:

1. Standard troubleshooting
 - a. Batteries installed correctly?
 - b. Batteries charged in direct sun for 8 hours?
 - c. Swap batteries from known working light?
2. Non Lake Lite batteries
 - a. Must be rechargeable
 - b. Must be 1.2v batteries (1.3+v will fry the circuit board)
 - c. They can get a larger mA (that is just the storage capacity)
- 3.
- 4.
- 5.
- 6.
- 7.

Lake Lite Inc

Solar Piling Light – 3 Color LED

Fits Docks, Pilings, Mooring Lights, Piers, Marinas, Boom Lights, Yacht Clubs, Buoys & more!

Key Features & Benefits

- Available with White or Black Fixture Colors
- White, Blue or Amber LED options
- 16-20 Hour Run Time**
- 24 Ultra Bright LEDs
- 120* Lumens (Varying with brightness settings)
- Fresh & Salt Water Rated
- Replaceable Rechargeable Battery (1 – LiFePO4 3000 mA)
- 1 Year Warranty

LIGHT CHARACTERISTICS

Light Source	24-Ultra High Intensity LEDs (8-White, 8-Blue, 8-Amber, Adjustable with magnet)
Lumens Output	12/24/42/60/78/96/120 Lumens * (Varies with Color/Brightness Settings)
Available LED Colors	White, Blue & Amber
Light Mode Options	Constant
Visible Range	1-2+ Nautical Miles (Varies with LED color & Brightness Setting)
Horizontal Divergence (Degrees)	360°
Vertical Divergence (Degrees)	100-180° Varies with Mounting
LED Life Expectancy (Hours)	>100,000 hrs

ELECTRICAL CHARACTERISTICS

Circuit Protection	Integrated
Nominal Voltage	3.2v
Autonomy (hours)	16-20 hrs* (*On Full Charge/**Varies with color/brightness Settings)
Temperature Range	14-158° Fahrenheit

SOLAR CHARACTERISTICS

Solar Module Type	Multicrystalline or Monocrystalline
Power (watts)	2.2 watts
Solar Module Efficiency (%)	16-17%

POWER SUPPLY

Battery Type	High Capacity
Battery Size	LiFePO4
Battery Capacity (mAh)	3000 mAh
Nominal Voltage (v)	3.2v
Battery Service Life	1-3 Years (Varies with local Environment)
Battery Service Access	Yes: User Changeable/Replaceable

PHYSICAL CHARACTERISTICS

Body Material	ASA Composite
Lens Material	UV Stabilized Polycarbonate
External Lens Design	Horizontal Lenticular
Internal Lens Design	Vertical Lenticular
Waterproof Rating	IP 68
Mounting	Fits on Pilings or flat surfaces 8" diameter and larger
Height	4-1/4"
Width/Diameter	8"
Weight	4 lbs

- Standard lights turn on at dusk and off at dawn (turns on in darkness and off in daylight).
- Light will also turn OFF when the battery level gets too low to protect them from draining all the way to ZERO amps.
- If battery gets EXTREMELY low, then it "may" accidentally switch to the OFF mode, meaning it does NOT come on after recharging the next day unless the magnet is used in "darkness" to switch it back up to level 1-2-3-4-5-6-7.
- 7 brightness levels, plus OFF. Levels are: 1-2-3-4-5-6-7-OFF
- A short pass of the magnet across the light's solar panel, will trigger the light to increase to the next brightness level. (1-2-3-4-5-6-7-OFF)
- To change LED color, hold down the magnet in the "sweet-spot" for 5 seconds.
- 3 color options in the light are White, Amber & Blue (Cannot change the actual LED Bulb)

Common Issues Piling:

1. **Light is not coming on**
 - a. **Slide the mag over the top?**
 - i. **No** - try and see if it comes on
 - ii. **Yes** - try battery from other working light
 - b. **Try battery from other working light (make sure it sees bright light then darkness) does it come on?**
 - i. **No** - probable bad light - replace and possible Call tag
 - ii. **Yes** - Bad battery - send new battery
2. **Light is not lasting all night long**
 - a. Slide the magnet over the top and reset to a level one.
 - b. Put the light in off mode for a couple days to let it get a full charge
 - i. **If a and b do not work, possibly send new battery.**

Common Issues 3 Color CHG:

1. **Light not working**
2. **Battery has died / or is connected wrong**
3. **Work for 1-9ish months then die (possible load test failure)**

Tech Support Steps:

4. **Weather, Sunny (DIRECT SUNLIGHT, NOT THROUGH A WINDOW)**
5. **Battery (Connected?, connected wrong?)**
6. **Slide mag over top to see if in off mode?**
7. **Is it in the warranty period?**
 - a. **if yes, send a replacement (when needed - call tag)**
 - b. **If no, offer to send it back for testing - not interested ask HL for discount code**

Sending Call Tag? Seek HL approval

Yes

1. Repeat Offender / Multiple replacements send
2. Stating multiple lights have issues
3. High \$\$\$
4. Seeing a trend with an item
5. Crazy issues
6. GRUMPY people

NO

7. Low \$\$\$
8. Light is DOA (Exception would be high \$\$\$)

Solar Bumper Light for FLOE Dock Bumpers

Fits FLOE Dock Bumpers
(30" & 40" FLOE Vertical Bumpers)

Key Features & Benefits

- Available with White LEDs Amber and Blue also
- 12-20 Hour Run Time**
- 3 Ultra Bright LEDs
- 40 Lumens
- Replaceable Rechargeable Battery (1 – AA 1200mA)
- 1 Year Warranty

Common Issues:

1. Amber Light not turning on but seems on during the day
 - a. Customer needs to push the on/off button once to reset the light.
2. Insert known or easily resolved issues here
3. Insert known or easily resolved issues here

LIGHT CHARACTERISTICS	
Light Source	3 Ultra-High Intensity Warm White LEDs
Lumens Output	40 Lumens
Available LED Colors	Warm White
Light Mode Options	Constant
Visible Range	500m+ (Depending on Installation)
Horizontal Divergence (Degrees)	360° - Horizon
Vertical Divergence (Degrees)	Negative Below Horizon
LED Life Expectancy (Hours)	>100,000 hrs
ELECTRICAL CHARACTERISTICS	
Circuit Protection	Integrated
Nominal Voltage	2.4v
Autonomy (hours)	12-20 hrs* (On Full Charge)
Temperature Range	14-158° Fahrenheit
SOLAR CHARACTERISTICS	
Solar Module Type	Multicrystalline or Monocrystalline
Power (watts)	1.10 watts
Solar Module Efficiency (%)	16-17%
POWER SUPPLY	
Battery Type	High Grade NiMH - ECO Friendly
Battery Size	1 x AA
Battery Capacity (mAh)	1200 mAh (Suggested: larger)
Nominal Voltage (v)	1.2v/ Battery
Battery Service Life	1-3 Years (Varies with local Environment)
Battery Service Access	Yes: User Changeable/Replaceable
PHYSICAL CHARACTERISTICS	
Body Material	UV Stabilized ASA
Lens Material	UV Stabilized PC
External Lens Design	N/A
Internal Lens Design	N/A
Waterproof Rating	IP 68
Mounting	Fits Over 3.5" Post
Height	4-1/4"
Width	5"
Weight/Diameter	1.6 lbs

Solar Wave Dots 2-pk – for Wave Armor Docks

Fits Wave Armor Floating Dock Systems

Key Features & Benefits

- Available White & Blue LEDs
- Pressure snap-fit into Wave Armor Pockets
- 16-20 Hour Run Time
- 1 Ultra Bright LED
- 6 Lumens
- Fresh & Salt Water Rated
- Replaceable Rechargeable Battery (400 mA)
- 1 Year Warranty

Common Issues:

1. Insert known or easily resolved issues here
2. Insert known or easily resolved issues here
3. Insert known or easily resolved issues here

LIGHT CHARACTERISTICS

Light Source	1-Ultra-High Intensity LED
Lumens Output	6 Lumens *Varies with Color
Available LED Colors	Warm White and Blue
Light Mode Options	Constant
Visible Range	50m – 300m+ Depending on Installation
Horizontal Output (Degrees)	360° + Horizon
Vertical Divergence (Degrees)	35-45°
LED Life Expectancy (Hours)	>100,000 Hrs

ELECTRICAL CHARACTERISTICS

Circuit Protection	Integrated
Nominal Voltage	1.2v
Autonomy (hours)	16-20 hrs (On Full Charge)
Temperature Range	-4 to 158° Fahrenheit

SOLAR CHARACTERISTICS

Solar Module Type	Multicrystalline or Monocrystalline
Power (watts)	0.45 watts
Solar Module Efficiency (%)	16-17%

POWER SUPPLY

Battery Type	High Grade NiMH - ECO Friendly
Battery Size	AAA
Battery Capacity (mAh)	400 mAh
Nominal Voltage (v)	1.2v
Battery Service Life	1-3 Years (Varies with local Environment)
Battery Service Access	Yes: User Changeable/Replaceable

PHYSICAL CHARACTERISTICS

Body Material	UV Stabilized Polycarbonate
Lens Material	UV Stabilized Polycarbonate
External Lens Design	Integrate Convex Optics & Diffusion
Internal Lens Design	360° Convex Optics & Diffusion
Waterproof Rating	IP 68
Mounting	Pressure snap fit for Wave Armor Docks
Height	26.25 mm
Width	91 mm Body
Weight/Diameter	.6 Lbs

Solar Pocket Lights for EZ Dock – 2-pks

Fits EZ Dock Systems (Spring tabs with pressure fit installation)

Key Features & Benefits

- Available in White LEDs or Blue LEDs Options
- 14-20 Hour Run Time**
- 1 Ultra Bright LED
- 12 Lumens
- Fresh & Salt Water Rated
- Replaceable Rechargeable Battery (400 mA)
NOT THE SAME AS DECK BATTERY
- 1 Year Warranty

Common Issues:

1. One of the most durable lights we have (rarely any replacements or tech calls)
2. Metal tabs on the ends that hold the light into the EZ dock will bend or break (we sell replacements)
3. Cust shatter the plastic housing (no replacements, need whole new unit, we do sell replacement pods (solar panel/light portion))

Tech Support Steps:

1. Standard troubleshooting
 - a. Batteries installed correctly?
 - b. Batteries charged in direct sun for 8 hours?
 - c. Swap batteries from known working light?
2. Non Lake Lite batteries
 - a. I have not had a customer yet find this battery anywhere else, ours is custom for this light specifically
 - i. Many cust purchase this battery thinking it will work for their generic garden light. It wont

LIGHT CHARACTERISTICS	
Light Source	1 Ultra-High Intensity LED
Lumens Output	12 Lumens *Varies with color
Available LED Colors	White or Blue
Light Mode Options	Constant
Visible Range Constant Light Mode	0.2 - 0.25 nm

Solar Pagoda Light - 3 Color LEDs

Monday, September 13, 2021 2:43 PM

Retail Cost: \$221.95
Sku: LL-SPL-PAGODA-WBA

[Solar Pagoda Piling Light Installation Video](#)
Lake Lite Inc

Solar Pagoda Piling Light – 3 Color LED

Fits Docks, Pilings, Pontoons, Piers, Marinas, Jetties, Yacht Clubs, Pillings & more!

Key Features & Benefits

- Being redesigned with estimated release 2022
- White, Blue or Amber LED options
- 6-24 Hour Run Time**
- 24* Ultra Bright LEDs
- 120* Lumens (Varying with brightness settings)
- Fresh & Salt Water Rated
- Sea Turtle Friendly
- Replaceable Rechargeable Battery (1 –1000 mA)
- 1 Year Warranty

However, a customer cannot use a 3 color changing pagoda top on an old style single color. Make notes of that for future ref on your one note. i have added a note to my to do list also to remember that come spring time

From <<https://teams.microsoft.com/multi-window?agent=electron&version=21101905014>>

Common Issues:

1. Customer stating light will not turn on
 - a. Wiring in battery cover is pinched
 - i. Have them move the wires around to see if the light turns on
 - b. Bad battery - have them do the battery testing
2. Insert known or easily resolved issues here

Battery Type	High Capacity LiFePO4 18500 1000mA
Battery Size	18500
Battery Capacity (mAh)	1000 mAh
Nominal Voltage (v)	3.2v
Battery Service Life	1-3 Years (Varies with local Environment)
Battery Service Access	Yes: User Changeable/Replaceable
PHYSICAL CHARACTERISTICS	
Body Material	Marine Grade Aluminum + Powder Coat
Lens Material	UV Stabilized Polycarbonate
External Lens Design	N/A
Internal Lens Design	N/A
Waterproof Rating	IP 68-Fully waterproofed
Mounting	Fits on Pillings or flat surfaces 5" diameter & larger
Height	9.75"
Width/Diameter	10"
Weight	4 lbs

- Standard lights turn on at dusk and off at dawn (turns on in darkness and off in daylight).
- Light will also turn OFF when the battery level gets too low to protect them from draining all the way to ZERO amps.
- If battery gets EXTREMELY low, then it "may" accidentally switch to the OFF mode, meaning it does NOT come on after recharging the next 5 day unless the magnet is used in "darkness" to switch it back up to level 1-2-3-4-5-6-7.
- 7 brightness levels, plus OFF.
- Levels are: 1-2-3-4-5-6-7-OFF.
- A short pass of the magnet across the light's solar panel, will trigger the light to increase to the next brightness level. (1-2-3-4-5-6-7-OFF)
- To change LED color, hold down the magnet in the "sweet-spot" for 5 seconds.
- Changeable LEDs are White, Amber & Biue

Retail Cost: \$129.95

Sku: LL-SML-X

Retail Cost for Barge: 169.90

Barge Sku: LL-SML-MGBS-X

***Same light fixture used for barge lights, just with added magnetic base.
Also the light fixture for buoys with navigational light/solar marine light***

[Solar Marine Light's Installation Video](#)

Solar Marine Lights

Fits Marinas, Docks, Boat Houses, Obstructions, Bridges, Buoys, Piers, Barges, Oil Booms, Mooring Lights, Safety Prevention & More!

Key Features & Benefits

- Available in White, Blue, Green, Amber & Red LEDs Options (In 1-sec flash or 5-sec flash mode)
- 30 Hour Run Time
- Up to 1.5 NM visibility
- 6 Ultra Bright LEDs
- 12 Lumens
- Fresh & Salt Water Rated
- Replaceable Rechargeable Battery (2200 mA)
- 1 Year Warranty

Common Issues:

1. Pulling the wires from the connectors or from the light when disconnecting the battery.
2. *If it does not state the flash rate it would be 60 flash/min
3. Amber lights LEDs are not as bright
 - a. Send replacement and provide call tag for testing here

- A short pass of the magnet across the light's solar panel, will trigger the light to increase to the next brightness level. (1-2-3-4-5-6-7-OFF)
- To change LED color, hold down the magnet in the "sweet-spot" for 5 seconds.
- Changeable LEDs are White, Amber & Blue

Canopy Light

Tuesday, September 13, 2022 11:32 AM

- How to resync a red/black key
 - UP AND DOWN BUTTON AT THE SAME TIME WITHIN 6 SECONDS OF PLUGGING IT INTO THE POWER BUTTON. RED/BLACK KEY FOB

AC to DC why only one canopy light for AC vs 3 for DC:

Ac motors have a transformer inside that converts AC to DC power, it is rated at 1.5 amps.

1 canopy light is 1 amp, max lighting for AC is 1. LT states if exceeding that 1 amp it will damage the motor.

Boat house light system - hold the select button until it blinks then set timer it will time out and set the saved time roughly 10 seconds. The push button will sync the same as the key fob hold sync button then push button

String Lights

Wednesday, November 23, 2022 8:57 AM

You Can daisy chain them together. Up to 3 lights together.

The below box has a battery, a charge controller and a timer in it.

Light Option	Watt Output	Controller Type	Max Watt	Special
String Light	15	AC - All-in-one	12	Flood Light option only
Flood	10	DC All-in-one	30	
Ceiling	15	Flat Plate/MCP	50	
.5m Bar	15	BHL Kit	90	45 w per output
1m Bar	25	Min RF	30	
Orange Canopy	15	New Mini RF 100	100	
White Canopy	16			

If a customer wants it to stay on longer than 15 minutes, they have to go in and change the timer.

The light kit will come with a 10w panel - any size panel upgrade if they want. 30/40w is major over kill

The string light is similar to the canopy light. You can do 2 on a DC motor and 1 on an AC motor.

FAQ

Thursday, December 1, 2022 8:42 AM

Solar Deck Lights

Do they come with batteries?

- Yes, Solar Deck Lights come with high quality, high capacity solar rechargeable batteries that have an expected life of 2 or more years.

Are the batteries replaceable?

- Yes, the batteries are can be replaced. We recommend using only Lake Lite's solar rechargeable batteries, which are available on our website for this product under the "Accessories & Spare Parts Tab".

Do Solar Deck Lights come with mounting screws? If not, what type is best?

- No, mounting screws are not included. For wooden surfaces, the recommendation is stainless steel # 10 or #8 x 1" length.

How should they be stored for the winter?

- Remove batteries **after a full day of solar charging**, then store in a dry location. We recommend storing the batteries and screws in a zip-lock storage bag so that no parts are lost.

Do I need to use all of the screws that are provided for the battery cover area?

- Yes, all of the screws must be used on the battery housing unit to insure proper waterproofing of the electronics and to keep the battery securely in position. Make sure the silicone seal is in place before tightening the screws. This will ensure the unit is fully waterproof.

Are they actually "Waterproof" or are they just water resistant? Will they withstand heavy rain? Are they submersible?

- Solar Deck Lights are truly waterproof and can tolerate heavy downpours including submersion, however, they are NOT recommended for long periods of submersion as they will not receive a charge.

How can I maintain the battery housing area to prevent corrosion of the metal battery contacts?

- Clean the battery contacts with WD-40 and that will prevent any rust. Foremost, be sure to tighten the battery cover so that it is pressing the silicone seal/pad securely in order seal the compartment since moist air will cause corrosion over time.

Troubleshooting: My lights did not come on after installation? What is the problem?

- First, make sure that the **plastic tab** that separates the electronic components from the battery has been removed.
- Second, make sure the batteries have been installed in the correct orientation and are popped securely in place. All of the batter housing cover screws should be installed to insure that the batteries stay in position.
- Third, be sure to allow the units to charge in direct sunlight for a full day to achieve optimum performance. Although the provided batteries are new, sometimes they lose charge while in the box. It is best to charge the lights for a full day outside in direct sunlight. They cannot be charged inside on a window sill. They need to be placed outside in direct sunlight.
- Last, make sure that the units have been placed in an area where they receive direct sunlight. Placing a solar product in a shady area will result in no charge or less charge which will dramatically reduce the lighting time.

Solar Dock Post Lights

Do they come with batteries?

- Yes, Solar Dock Post Lights come with high quality, high capacity solar rechargeable batteries that have an expected life of 2 or more years.

Are the batteries replaceable?

- Yes, the batteries are can be replaced. We recommend using only Lake Lite's solar rechargeable batteries, which are available on our website for this product under the "Accessories & Spare Parts Tab".

Do Solar Dock Post Lights come with a set screw to secure the base to the post?

- Yes, they come with a set screw.

How should they be stored for the winter?

- Remove batteries **after a full day of solar charging**, then store in a dry location. We recommend storing the batteries and screws in a zip-lock storage bag so that no parts are lost.

Are they actually "Waterproof" or are they just water resistant? Will they withstand heavy rain? Are they submersible?

- Solar Dock Post Lights are truly waterproof and can tolerate heavy downpours. However, they are NOT submersible for any long period of time. The LEDs are changeable, thus the contacts are exposed if the light is submerged. Should the light be submerged, clean off the contacts (wires extending from the LED) with clean water and spray them with WD-40. All other components including the battery is waterproof and sealed if you have tightened the battery cover securely.

Troubleshooting: My lights did not come on after a day of solar charging? What is the problem?

- First, make sure that the battery is securely in place.
- Second, be sure to allow the units to charge in direct sunlight for a day to achieve optimum performance. Although the provided batteries are new, sometimes they lose charge while in the box. It is best to charge the lights for a full day outside in direct sunlight. They cannot be charged inside on a window sill. They need to be placed outside in direct sunlight.
- Third, make sure that the units have been placed in an area where they receive direct sunlight. Placing a solar product in a shady area will result in little or no solar recharging of the batteries which will dramatically reduce the lighting time.

Solar Dock Dots

Do they come with batteries?

- Yes, Solar Dock Dots come with high quality, high capacity solar rechargeable batteries that have an expected life of 2 or more years.

Are the batteries replaceable?

- Yes, the batteries are can be replaced. We recommend using only Lake Lite's solar rechargeable batteries, which are available on our website for this product under the "Accessories & Spare Parts Tab".

Do Solar Dock Dots come with mounting screws?

- No, mounting screws are not needed. The lights drop down into the 1-3/8" mounting hole on the dock surface.

How should they be stored for the winter?

- Remove batteries **after a full day of solar charging**, then store in a dry location. We recommend storing the batteries in a zip-lock storage bag so that no parts are lost.

Are they actually “Waterproof” or are they just water resistant? Will they withstand heavy rain? Are they submersible?

- Solar Dock Dots are truly waterproof and can tolerate heavy downpours. However, they are NOT submersible for any long period of time. . The LEDs are changeable, thus the contacts are exposed if the light is submerged. Should the light be submerged, clean off the contacts (wires extending from the LED) with clean water and spray them with WD-40. All other components including the battery is waterproof and sealed if you have tightened the battery cover securely.

Troubleshooting: My lights did not come on after installation? What is the problem?

- First, make sure that the **plastic tab** that separates the electronic components from the battery has been removed.
- Second, make sure the batteries have been installed in the correct orientation and are popped securely in place. All of the batter housing cover screws should be installed to insure that the batteries stay in position.
- Third, be sure to allow the units to charge in direct sunlight for a full day to achieve optimum performance. Although the provided batteries are new, sometimes they lose charge while in the box. It is best to charge the lights for a full day outside in direct sunlight. They cannot be charged inside on a window sill. They need to be placed outside in direct sunlight.
- Last, make sure that the units have been placed in an area where they receive direct sunlight. Placing a solar product in a shady area will result in little or no solar recharging of the batteries which will dramatically reduce the lighting time.

Whats the Difference of 12v or 24v ?

12v	Requires ONE 12v Battery	Normal Lifting Speeds	Slightly Lower Cost
24v	Requires TWO 12v Batteries	2X Faster Lifting Speeds	Slightly Higher Cost

* NOTE some Boat Lift motors or Hydraulic systems can only run on 12v, Some may be able to run on 12v or 24v. Please check with your boat lift motor or hydraulic system manufacturer.

- How many times will the batteries lift the boat?
 - 10-16 lifts with fully charged batteries depending on the size of the boat, boat lift, and more importantly the actual run time the blower motor operates to fully lift the boat.
 - Using the above sizing chart will help ensure your system is replacing more energy than it uses on a weekly basis. This will result in the batteries always being fully recharged.
 - *Using more power than what is replaced on a weekly basis will "eventually" result in dead batteries.
- Time of operation – (motor run time)
 - The sizing chart is based on the average 3-4min run time which is adequate for most boat lifts.
 - Shorter run times use less power & can be paired with smaller solar chargers.
 - Longer run times use more power & should be paired with larger solar chargers.
- Should I get a larger than needed solar charger? – will it damage my batteries?
 - There is NO risk to oversizing. It never hurts to go larger! The batteries will simply recharge faster.
 - The integrated solar charge regulator will prevent overcharging the batteries.
- Notes & Considerations:
 - Consider & plan for vacations & holidays when you may operate your boat lift more than normal.
 - Mount the solar charger in direct sunlight at 30-45 degrees facing the most southward direction.

All boats and boat lifts are different, there are numerous factors and variables to consider when sizing the solar charger. The above sizing chart is a general recommendation only.

- Quick notes:
- AC = lift plugged into wall
 - DC = lift connected to marine batteries
 - The AC DD motor runs about 10-12Amps on a normal load. ShoreStation 36108 or winches that are single chain should possibly get the HT motor.
 - Customers must have or change to a 15AMP minimum breaker. The other things Jeff recommended is that we suggest they get a 12 gage extension wire for usage.

Different Kinds of Lifts and what the customers will need:

- BLOWER ()
 - Keywords: tanks, air displacement, AIR
- CABLE
 - Keywords: Belt & Pulley
 - Variants
 - Enclosed Gearbox
 - C-Face
 - E-Drive
 - 1 Motor or 2?
 - 1
 - Saltwater, brackish, or fresh?
 - Salt/brackish = Stainless Steel
 - Fresh = Epoxy
 - 2
 - Saltwater, brackish, or fresh?
 - Salt/brackish = Stainless Steel
 - Fresh = Epoxy
 - Boathouse or Piling System?
 - Boathouse = Shared
 - Piling = Split
 - Limit Switch?
 - Spring Limit (only up OR down)
 - Conversion Wire for Rotary Limit (up AND down
 - Rotary Sold Separate
 - MUST purchase through brand of lift
 - e.g., TideTamer to TideTamer; ~\$200/per switch
 - Must have 1 per motor
- WHEEL
 - DC or AC?
 - DC
 - DC Motor
 - DC Motor + Solar Kit
 - AC

CONTROL BOX REM...

Direct Drive / Enclosed / A-Drive / E-Drive / Sea Drive / AMS / Etc..

Direct Drive Boat Lift Gearboxes

Direct Drive or Enclosed gearboxes do not have any exposed gears. They are fully enclosed with internal lubrication. Our DC Marine grade motors will fit every brand, make, & model in the boat lift industry.

Flat Plate – Open Belt/Pulley Style

Boat Lift Gear Plate

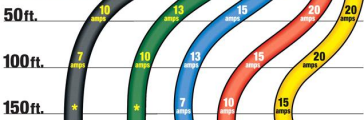

Flat Plates or Gear Plates have a large exposed gear & worm drive operated by a belt & pulley. For this style we provide an extra foot mount for the motor to attach to the gear plate. Our foot mount will allow our DC Marine Grade motors to quickly attach to any brand, make & Model gear plate in the boat lift industry.

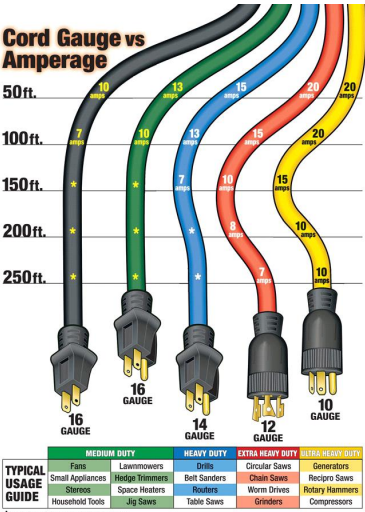

Integrated Winch Boxes

Suggested lubricant for Integrated Winch Boxes: STAR BRITE Trailer Wheel Bearing Grease NLG#2 - Advanced Marine-Grade Protection Against Rust, Corrosion & Water Washout

Cord Gauge vs Amperage

Battery Specs

Thursday, September 22, 2022 1:18 PM

AGM - recommendation for batteries: Wheel Chair Size Battery for the All-in-ones only.

AGM is a ticker consistency lead acid battery that is completely enclosed, they charge a little faster and have a higher life expectancy.

Lithium - not ideal for Hydraulic controllers. Will work on DD/WB motors, but must be 100 amp BMS or higher. Our motors pull 50-75 amps. Will work fine for charging kits but won't charge the battery to 100%, only to about 95%. The voltage will drop from 100% to 25% instantly, instead of lead acid its 100-75-50-25...

Cable

Verify gearbox or flat plate

Stainless or epoxy

Motor power cable

Why does my blower motor raise but not

lower: Check the exhaust hose to see if it is plugged then it will restrict airflow when lowering the boat (but would not affect raising the boat)

Verifying Good to Ship - Online Orders

Monday, October 31, 2022 9:48 AM

Was a cart share sent or email communication in the sales box?

Yes - good to ship.

No - call customer and ask if he has spoken with Jeff or Heather.

- o Asking to make sure everything is specific for the lift you have
- If the answer is no, then place him on hold and see if one of us are available to speak with him.
- If we are not available, let him know we will call back to go over the order and ensure all aspects of the order will work with his lift setup.

We just are making sure the correct lift to match the motor being purchased. I check to see if they have a gear box style or belt and pulley. I ask how much does their boat weigh to ensure the solar panel size is big enough. I make sure they are aware they must drill holes in their roof, if they select the z brackets.

His neighbor has the exact same system, so I kept the questions short, he was very familiar with how everything works.

Do you truly have the belt and pulley?

Are you on fresh water?

Went with the 30w - How much does your boat weigh? / Do you use it every day like 3x a day?

Roof mount z brackets -

Feet for the power cable -

Greg's Board

QTY | What is needed | Customer name or Dealer | Notes

1 | 18*16*8 LG Vents | Smith | Notes if needed

QTY	What is Needed	Customer/Dealer Name	Notes
1	18x16x8 LG vent	SMITH	Any notes that Greg would need to know.

2m L/R systems are 30-40% faster than AC
1.5hp loaded = 2300 rpm
Less than 1.5 = 1.5 2600 rpm
2h = 1900 rpm overloaded

Inside the control box pictured below you will find the RF black button that you will have to push hard to activate (maybe try a pencil), hold the button until the red light comes on, then hit any button on the fob. It will flash red inside the receiver box once synced.

If a customer encounters issues with the key fobs working "intermittently," it may be due to the motor itself interfering with the signal. "Ensure that the motor is not located between fob and control box; the motor creates interference. Imagine the motor creates a 2ft sphere ball around the motor that acts like a LEAD wall to block radio signals."

Customer states the motor will not power on.

- Battery - Level 24.4 which is too low or one battery is much lower than the other, check for load test failure. Check for age of batteries - old batteries will not produce enough power to power the motor on.
- Fuse - check inside the control box and replace the fuse, even if it doesn't look blown with a 3 or 5 amp fuse.
- Battery/power cables - check to ensure the pins are sitting properly in the Anderson connectors, if they are not in place, they will not clip and lock together. Often one pin is too far back in the holder.
- Manual Wall Switch - make sure the connection is tight, you should hear a click sound once tighten down completely.
- Limit switch wires - make sure they are connected to each other, if loose

it will make the system believe there is an improper installed limit switch.

Wednesday, August 24, 2022 9:58 AM

Stainless Steel or Epoxy

Battery options if they are concerned 40w panels won't be big enough.

These batteries are cheaper than trying to add 4 battery packs on each side, they charge twice as fast and have a higher holding capacity than 6 batteries combined.

<https://www.litime.com/products/12v-100ah-mini-lifepo4-battery>

<https://www.litime.com/products/12v-100ah-max-lithium-battery>

Greg's Board

1 - 2M L/R - NAME
SPLIT or SHARED
CONVERSION WIRE? Y/N

If one a customer complains about their boathouse lights not staying on, as of December 2025, an issue was discovered where the boathouse light operates normally from the MASTER CONTROL PANEL, but only stays on for a few seconds from the KEY FOBBS. This is a coding issue, and the solution is to swap MASTER CONTROL PANELS, either by having them ship their panel back to us, or ship them a panel and return label.

Greg's Board

QTY	TYPE	CUSTOMER	NOTES
1	2M L/R SPLIT	ONLINE 8220 (FOX)	CONV WIRE
1	2M L/R SHARED	BOAT'S DOUGS	NO CONV WIRE

For Split EP Motor will be the same as below

	LF-2M-LR-SPLIT-SS 20W-24V SOLAR				2 MOTOR BOXES 16*10*8 #28 SOLAR PACKAGE 36*12*10 #30 SLAVE BOX & FIBERGLASS BOX 21*20*11 #33 MASTER CONTROL & FIBERGLASS BOX 21*20*11 #23
--	------------------------------------	--	--	--	--

NL = NO LOAD 2900 rpm
At 1.5hp loaded its around 2400 RPM
Less than 1.5hp load is somewhere between etc

DEFAULT MODE / AUTO MODE

All MASTER CONTROL PANELS should be in DEFAULT MODE.

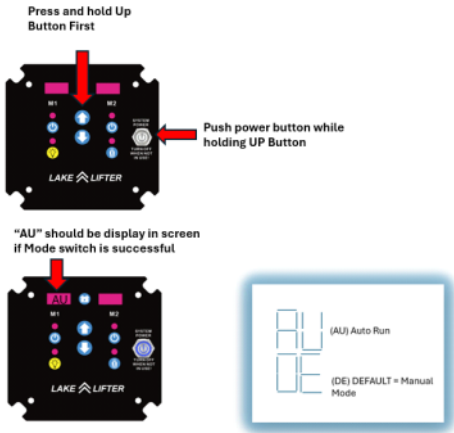

Upon powering the unit on, the top left LCDs light up, stating which operation MODE is active. A common tell for this issue is if a customer reports the system is only operating in one direction, no matter which button is pressed.

AU = AUTO
DE = DEFAULT

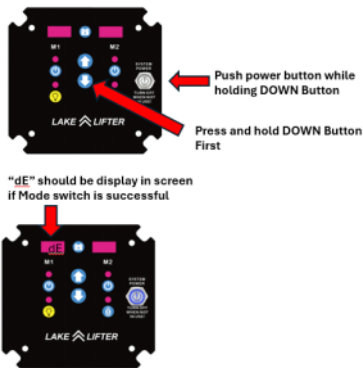

To activate a mode, power the unit off. Hold down UP to activate AUTO or DOWN to activate DEFAULT, the press the power button again.

Master Control Instructions

Boat House Light Kits

Wednesday, November 30, 2022 10:45 AM

****MUST ZERO OUT THE HIGHLIGHTED ITEMS BELOW****

Note - the LED light pods can be substituted for any of our light options.

2 LED outputs - each one can handle 45 W's max!

Light Option	Watt Output
String Light	12
Flood	10
Ceiling	15
.5m Bar	15
1m Bar	25
Orange Canopy	15
White Canopy	16

****side note**** Picture - battery/controller box not updated, manual wall switch out dated also and is now a wireless push button.

Will update, once photos are completed

Range
Currently 150 ft in clear sight

Greg's Board:
1 - BHL - [CUSTOMER] - [NOTES]

The original style drew 15 watts, while the new style uses 5 watts for the first light and then drops significantly for each additional light in the chain. Because of the lower wattage, customers can technically daisy-chain many more string lights together, but we recommend capping it at 4 string lights per output for safe operation.

Sam and I tested four daisy-chained string lights using an Eagle Eye, and the total draw was 11 watts, so there is plenty of capacity left if customers choose to expand.

Each terminal on the Boathouse Light Systems supports a maximum of 45 watts. Customers may use Y-splitters and mix different light types as long as the combined wattage does not exceed 45 watts per terminal.

Are they 2m system

Is this a 4 post or elevator - elevator is shared

Tide tamer

Delete on the AC motor and the control box

Could be 1500 to 1800 motors - that would take it off the lift price.

If you don't have power to the dock it could be 4-10k to get power

Way cheaper and 30-40% faster

Kicker - with the tide tamer - are you going to be using limit switches -- 2 options

With a Dc you need **two** limit switch - one for each motor - you have to tell the dealer that you need 2. You can always add them later

The nice thing is if you ever get out of level yoy do not have to get out of the boat

You will never need go out of level. Ours you can level with key fob or at the master control panel (extreme example -

One on back and one on front

When you orde a tide timer some of the lifts they will not add -

If you do they will auto shut off - it will prevent hitting the ground or going to high. If you have low shallow water. The cable can start to unravel.

Lunmar 2800 - will not work with our motor

WE do not sell their limit switch

Our kit we offer 2. spring is only up ORR down

If you wanted an up and down you would need 4 (cheaper to go with tider tamer)

If you go with their limit - we will give you --

Cut off the limit switch - stip the wire

The other option is

What dealer are you looking at - we deal with some of their dealers

If they are not a dealer of ours 0 they can order from us and have them install it for you.

It is not hard - just takes time if you do it yourself.

Ours is plug and play

Master control panel - signal wire you have to cut and bring to length to each slave box

Each motor - slave box

We do not know where you are mounting the boxes which is why you have to measure and cut.

Do need to know where you mounting to get the motor cable extension "2ft off dock and 8ft between" comes with 6 feet - 5 foot connector on each one.

FIX MARINE 2M

Tuesday, November 14, 2023 8:11 AM

Fix Marine uses FM-DCM-SS-24V-2350RPM for **all** 2motor LR systems unless they state otherwise.

A normal motor is 2800 no load @ 1.5 HP with load it will be about 2300 RPM

Fix Marine motor is 2350 no load @ 1.5 HP with load it will be about 1800 RPM

1600 pwc flip side

Wednesday, March 11, 2026 7:36 AM

How to FLIP:

AC Units: remove the 4-control box mounting screws and switch the control box to the other side of the winch.

- Inside the control box flip the BLUE & GREEN wires on the contactor to switch motor direction.

DC Units: mount anyway necessary, then apply one of 2-free Instruction stickers over the exposed hole side, sticker covers the holes of the winch.

Motor wires that attach to the contactor can be swapped to change direction as necessary: (cable should wrap on drum side closest to lift post)

AC Direct Drive Motor Help?

Monday, June 17, 2024 12:52 PM

1. Power Source and Extension Cord Guidelines**

- a. Recommend using a 200 feet or less extension cord.
- b. Use a 10 or 12-gauge extension cord for optimal performance. (The lower the gauge the thicker the wire)
- c. A GFCI (Ground Fault Circuit Interrupter) should be used before the power goes over water.

2. NO GENERATORS!!

- a. If the customer has no other choice! Must be the absolute last option!
 - i. Minimum of 4,000 watt generator needed (Roughly \$1,000 for a good one)

1. - **Considerations**

2. - Ensure the power source is safe, either from the main house panel or the outlet where you're plugging in. 110v-120v, 12A-13A required.
3. - Avoid using 14 gauge or smaller extension cords as they are not recommended.
4. - If running new electrical from the house to the dock or shore, use a minimum of 10 gauge wire.

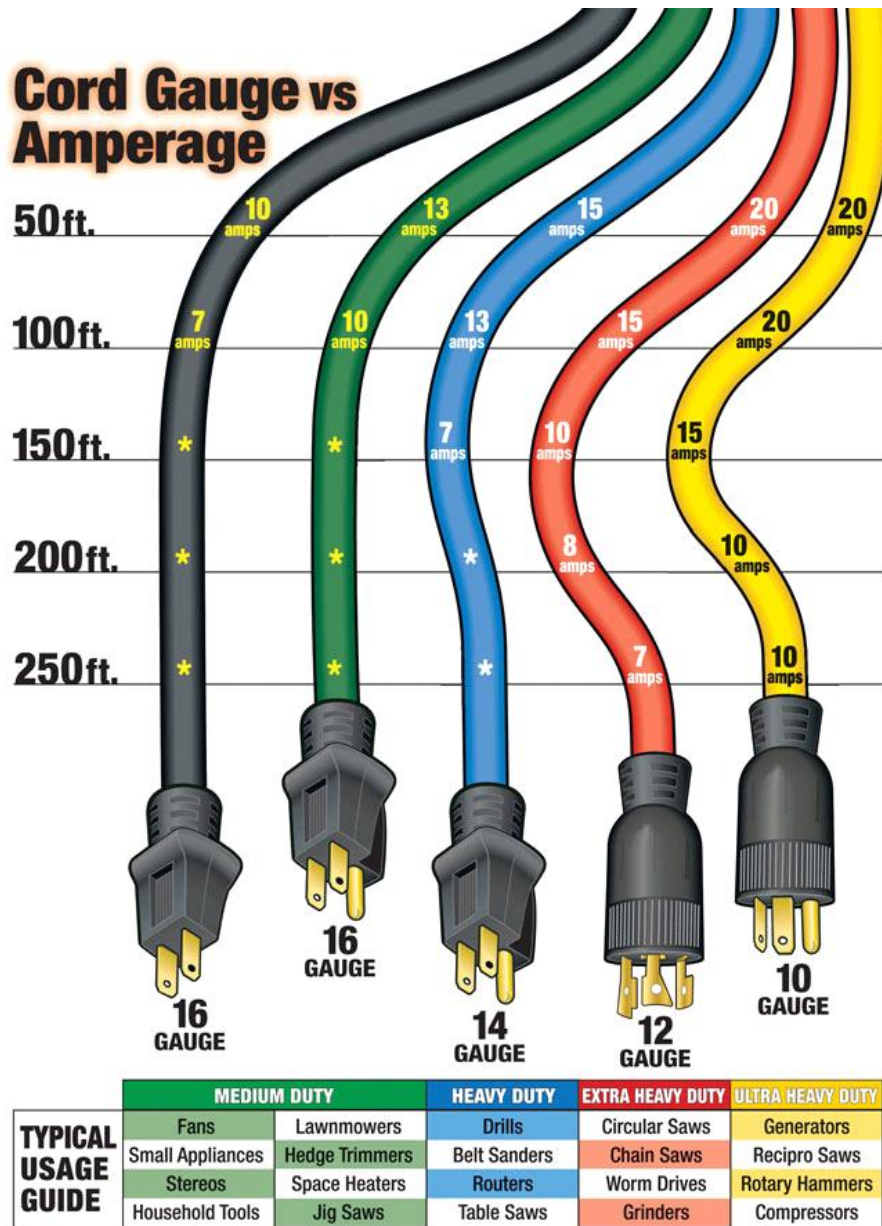

1. **Special Circumstances**

1. - If the distance from the house to the edge is 500 feet and another 200 feet of extension wire is needed, ensure that big gauge wire is used for the initial 500 feet.
1. - [] Ensure the power source is safe and either from the main house panel or the outlet where you're plugging in.
1. - [] Use a 12 gauge extension cord for optimal performance.
1. - [] Install a GFCI before the power goes over water.
1. - [] Avoid using 14 gauge or smaller extension cords.
1. - [] If running new electrical from the house to the dock or shore, use a minimum of 10 gauge wire.
1. - [] For distances requiring 500 feet from the house to the edge and another 200 feet of extension wire, ensure big gauge wire is used for the initial 500 feet.

SHORESTATION

Monday, March 2, 2026 4:47 PM

OUR ROUND POST GOES INSIDE THE LIFT LEG, THEN THE CANOPY POST WILL EITHER SLIDE INSIDE OR OVER THE POST DEPENDING ON THE CANOPY STYLE.

WiFi/Bluetooth Touchscreen Control Panels

Wednesday, August 6, 2025 10:10 AM

If a customer wants to "deactivate" the auto-up feature on their Triton or Ultra touchscreen control panels, advise them to raise the **AUTO UP** and **AUTO UP DEPART** ("auto up after departure") timers to 12:59. This prevents the lift from raising too soon (e.g., if they boat for 2 hours and the lift is programmed to automatically raise after 30 minutes, they will need to lower the lift when they return to port. To avoid this, extend both AUTO UP and AUTO UP DEPART timers).

If a customer needs to bypass their PIN, the master key code is 87878.

To delete a PIN outright, reset the PIN by "creating" a new PIN, but submit a blank PIN instead.

Blower Motor Controller - Resetting RF to Sync Key Fobs

Wednesday, August 6, 2025 10:10 AM

1. Power off the unit
2. Power on the unit
3. Hold down the SYNC button for 20 seconds
4. Wait until the controller beeps, signaling that synced fob data has been erased

Wi-Fi/Bluetooth(BT)

Tuesday, December 16, 2025 10:06 AM

When new firmware ("FW") is pushed, the app will notify a customer (with a push notification). If the customer DOES have the unit connected to Wi-Fi, it will automatically update within the hour. They can manually trigger the update immediately upon power cycle of the device (e.g. restart) or they can always go to Settings > Firmware, and check for updates there.

Direct drive / winch boxes do not have Wi-Fi built in (we could but no reason really - no need to add a tertiary feature that would just inflate the cost/price). All firmware updates are performed through the app.

Blower Motor Products = (Wi-Fi or via App / BT)

Direct Drive / Winch boxes = (App / BT)

Lake Lifter Direct Drive Motor

Direct Drive Tech Support FAQs

Wednesday, May 14, 2025 4:06 PM

1. POWER

- Ensure that the silver power button is turned on and the blue LED ring around it is illuminated.
- If this does not turn the motor on:
 - AC: may be a problem with the electrical wiring leading to the dock. Ensure the motor's AC power cable is securely plugged in.
 - DC: test batteries for voltage, both resting and under load.
- To operate the motor with a key, turn the key **RIGHT** to **RAISE**, and **LEFT** to **LOWER**.

2. KEY FOBS / SYNCING

- Key fobs are synced before they leave the Lake Lifter campus. Sometimes, overeager customers manage to de-sync them before use.
- To un-sync key fobs, hold down the **LIGHT BULB** button at any time while the unit is powered on.
- To sync key fobs:
 - Power the motor OFF
 - Power the motor ON
 - The motor will BEEP. After the beep, you have roughly 6 seconds to press the **LIGHT** and **STOP** button at the same time. Rapidly press, click once, or hold - all methods work. If this does not work, retry from step **c-i**.
- If a customer is experiencing problems syncing key fobs:
 - Ask them to send a photo of the front of the motor - we want to ensure that the sticker on the front case of the motor states **WIRELESS** and not **MANUAL**. Some customers think they can simply purchase key fobs separately and they'll work on a manual motor. This is not the case.
 - There is a fuse* inside of the motor that might be blown.
- Limit the number of key fobs synced to one motor to 10.
 - A key fob may not be synced to multiple motors at one time. It must be desynced from one motor in order to sync to another.

3. SETTING LIMITS ("AUTO STOP")

- "Limits" are user-defined parameters that specify the range in which the motor will run. An "upper limit" defines the highest the motor will lift the carriage, and the "lower limit" defines the same for the lowest point the carriage will go.
- To set limits:
 - Ensure the motor's power is **ON**
 - Hold the **STOP** button for around 15 seconds, or until the motor announces it's entering a programming menu. This menu is timed. **Holding the STOP button at any time, including during the programming menu, will restart the limit programming process.**
 - Before the timer expires (around 20 seconds if the unit is left idle), the customer needs to set their first limit by raising or lowering the level of the carriage to their desired height (typically high enough so the boat is out of the water, or low enough in the water that they can safely sail away), then clicking the **STOP** button **ONCE**. The motor will chime and notify the user that their first limit has been set.
 - CLICK/BRIEFLY PRESS, but **DO NOT HOLD DOWN** the **STOP** button. **Holding will restart the limit programming process.**
 - Repeat the process for the second height - raise/lower the carriage, then click **STOP ONCE**.
 - The customer can set their upper or lower limit first. The order does not matter.
 - If they take too long, the motor will exit this programming menu and erase all height data for the customer's safety. To reenter the programming menu, just hold the **STOP** button until it enters the programming menu again.
 - If the customer presses **STOP** too rapidly, instead of defining both limits at the exact same height, the motor will instead clear all limits and declare "No sensor detected." This is to prevent the motor's programming from locking the lift at one certain height. If a customer sets a limit and the motor then sounds the "No sensor detected" error, this is because they pressed **STOP** twice. ask them to slow down, pressing the **STOP** button only once at a time.

4. OPTIONAL - BOARDING HEIGHT

- An optional "third" limit can be programmed. The "boarding height" is typically used to stop the lift at a height convenient for onboarding or offboarding the boat. The customer defines this by setting the "boarding height" in between the first two limits:
 - Ensure the motor's power is **ON**
 - Hold the **STOP** button down to enter the programming menu.
 - Before the timer expires, the customer needs to set their first limit by raising or lowering the carriage to their desired height, then clicking the **STOP** button.
 - Instead of setting their second limit, they need to define the boarding height by adjusting the lift to said boarding height, then click the **LIGHT BULB** to establish the "third" limit.
 - Then set the second limit as usual by clicking the **STOP** button. The motor will now progress contextually based on the carriage's current height:

1)	From bottom to top:	lowest -> boarding height -> highest
	From top to bottom:	highest -> boarding height -> lowest
	From boarding height to highest:	boarding height -> highest
	From boarding height to lowest:	boarding height -> lowest

5. AUTO RUN - LIMITS MUST BE SET BEFORE USE

- Once the limits have been defined, the customer can enable the motor to run in "AUTO-RUN" mode. This makes it so the motor will automatically raise or lower to its next defined limit.
 - TO ENABLE AUTO-RUN
 - Power the motor off.
 - Insert the manual key into the key switch.
 - Hold the key switch to the **RIGHT/UP**.
 - With the key held to the right, power the motor on.

How to Replace an RF Unit | Lake Lifter Direct Drive Motor

*In-line fuse on the internal control box:

- 5) Wait until the motor chimes and announces that Auto-Run Mode is engaged.
- ii. TO DISABLE AUTO-RUN
 - 1) Power the motor off.
 - 2) Insert the manual key into the key switch.
 - 3) Hold the key switch to the **LEFT/DOWN**.
 - 4) With the key held to the left, power the motor on.
 - 5) Wait until the motor chimes and announces that Auto-Run Mode is disengaged.

6. ERROR CODES

Setting limits

Thursday, June 22, 2023 2:15 PM

If the magnet is incorrect side then when you set limits it will be between zero and zero... confirm the magnet is making the red light on the sensor blink when it passes, if not the magnet "yellow or green or purple" whatever the color is flip it around and make sure the red light blinks when it passes by.

Delete limits and then just wait" don't program any" when programming time expires try it , then it will work, if that's the case it's the magnet that is on backwards and when programmed it was programmed without detecting the sensor (so it thinks there is zero turns to go to the limit)

Won't Run in Auto Run

Thursday, July 6, 2023 8:16 AM

Customer emailed the below. Jeff advised in this situation they need to flip the magnet to correct.

my DC powered lift won't run in auto mode since new. the only way I can operate the lift is to hold the stop button, wait for prompts, raise or lower. have set the limits but the lift wont operate at all until I rest limits by pushing the stop for 20 seconds? must be faulty and need replacing as its never work correct since day one

DC Motor Power Failure

Monday, April 14, 2025 4:19 PM

Customer state the DC motor now has no power & the battery is fully charged

1. Check the fuse at battery: the small buss fuse with clear window: when they get bent they sometimes break and are barely touching to the point they have just enough contact to turn the unit on but cant run the motor or anything else other than the power light. Wiggle the fuse at battery cable/battery positive terminal it to see if it looses connection: if fuse is broken jut bypass the buss fuse until another is put on.
2. Check red battery Anderson connector: pull it apart and check that PINS inside red battery connector are fully seated and up on BOTH red connectors. In some cases when pushing them together if the pin was not fully locked it will push one of the pins back and there is barely any connection: in such cases power light will turn on but when you go to do something nothing happens as there is no real contact to allow much current.
3. Lastly: If the unit was connected to the battery backwards for a split second the internal fuse may be partially blown in which case you typically WOULD NOT see the blue power light: however if connected backwards in some rare occasions the RF could have been damaged before the fuse blew. Rare but possibly could have happened.

Shaft Threading

Tuesday, September 13, 2022 11:33 AM

Video showing the motor threading on and off the shaft

IMG_0669

Cause:

1. The customer doesn't have the adaptor threaded on tight enough. Without a boat on the lift to force the load onto the shaft, it doesn't allow the adaptor to thread on tightly, causing it to thread on and off with up/down.

Resolution:

1. Add a boat to the lift or they may need to do both of the below also.
2. Use two wrenches, one to hold the shaft and one to hold the adaptor to tighten it on.
3. Use blue locktite – not a permanent type, just one that will help it tighten but not tighten it on forever...

Notes for Motors and stuff

Friday, January 28, 2022 10:50 AM

AC- Plug in / Electric Powered

DC - Solar Powered

PWC - Jet Skis or similar (small)

Wheel Drive (**ONLY 12V**) - Cheapest (and slowest) Option - The motor cranks the wheel for the human.

Installation Kits **IMPORTANT**

What type of winch do they have? If it is different that the lift brand the WINCH is more important

If a customer cannot tell you for sure, ask for a picture of the winch.

Auto Stop

You STILL have to hold the button until the lift reaches the desired location

Canopy Lights

AC Motors can only **have 1** light strip

- AC MANUAL MOTORS CANNOT HAVE LIGHT STRIPS

DC motors can have 2 (dual) light strips

Manual Motors (even pendant switch) will have a key fob for the canopy lights

Wireless motors will not have a separate key fob (the key fob for the motor has a light button)

- Motor pulls 45-70 amps depending on the boat
- LT battery cable wires break - replace with amazon Anderson connectors for 6 gauge wire
- Motor wobble - does not affect anything, caused from wear of years on the winch shaft but will not alter the life span of the motor.

We do not offer Lift Tech motors for Fulton winches

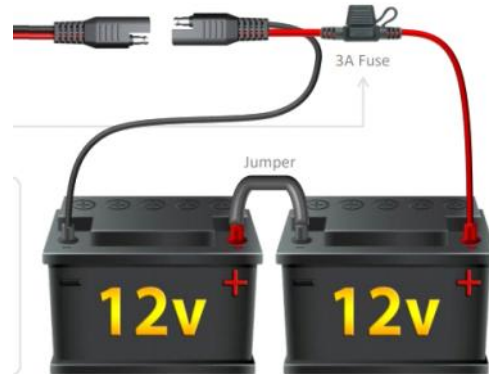

When processing orders - You need to call and verify with the customer if it says any of the below

- No to an Install Kit (more than likely trying to save \$40...)
- If they select red or blue spools (drum) "Did you open the winch box to see the color wrapping around the spool?"

Send to HL if they say or select the below

- PWC
 - 24V batteries set to be parallel (or Jeff)
- If the order shows Shore Station 36108 notify HL
 - **Shore Station 36108**
20/25 years ago - Hand over hand turning the wheel. That lift cannot hold more than 3600 lbs. How much does your boat weigh - under 3400 lbs: use shore station
over 3600 next question
No answer or saying over 3600 - probably need a slower gear ratio (80:1 slower than the normal one) and if they want to do solar the NEED to do 24V

Battery in Series

Boat Lift Solar Charging Kits

Monday, September 13, 2021 2:43 PM

Insert the wiring diagrams

Insert the chart to determine what size is needed of a panel

Create a breakdown of what comes in each kit (do the same for how dealer orders need to be built

Insert Battery Tray guide to assist with knowing how to help a customer depending on their lift

Include the regs/indicators/solar indicators/and the other guys to explain what and why they work

Include the mounting arm and gromet info and guide (along with how to select with canopy size)

Winter Storage Tips

Replacement wire kits and the 2 styles

Solar panel output specs

12v = 18-24

24v = 38-44

12v panel on 24v battery configuration will not ever charge the battery - not high enough voltage

24v panel on 12v panel will overcharge the battery even with a regulator on the system.

Battery type needed for Lake Lite and come Lake Lite charging systems/setup

Wal-mart \$70-80

Everstart Deep cycle marine battery group 24 or 27 - 1000MCA (Marine Cranking Amps)

Solar Charging Kit

Size Guide

IMPORTANT		MINIMUM SOLAR CHARGER SIZE REQUIRED						
Type of User ↓	# of Lift Cycles PER 7-DAY WEEK	2000 lbs BOAT LIFT	3000 lbs BOAT LIFT	4000 lbs BOAT LIFT	5000 lbs BOAT LIFT	6000 lbs BOAT LIFT	7000 lbs BOAT LIFT	8000 lbs BOAT LIFT
Weekend Only Use	2 to 4 Lift Cycles/Week	10w-12v	10w-12v	10w-12v	15w-12v	20w-12v	20w-12v	20w-12v
						20w-24v	20w-24v	20w-24v
Weekend & Slight Weekday Use	3 to 5 Lift Cycles/Week	10w-12v	10w-12v	15w-12v	20w-12v	20w-12v	30w-12v	30w-12v
					20w-24v	20w-24v	30w-24v	30w-24v
						30w-12v		
Daily Use	5 to 7 Lift Cycles/Week	10w-12v	10w-12v	20w-12v	20w-12v	30w-12v	30w-12v	30w-12v
			15w-12v	20w-24v	20w-24v	30w-24v	30w-24v	30w-24v
					30w-12v		40w-12v	40w-12v
					30w-24v		40w-24v	40w-24v
Heavy Use	8 to 10 Lift Cycles/Week	15w-12v	15w-12v	20w-12v	30w-12v	30w-12v	40w-12v	40w-12v
			20w-12v	20w-24v	30w-24v	30w-24v	40w-24v	40w-24v
			20w-24v			40w-12v		

Whats the Difference of 12v or 24v ?

	12v	24v
Requires	ONE 12v Battery	TWO 12v Batteries
Lifting Speeds	Normal Lifting Speeds	2X Faster Lifting Speeds
Cost	Slightly Lower Cost	Slightly Higher Cost

*** NOTE some Boat Lift motors or Hydraulic systems can only run on 12v, Some may be able to run on 12v or 24v. Please check with your boat lift motor or hydraulic system manufacturer.**

SOLAR SIZING CHART

* Based on 3-4 min Operation Time		Boat Lift Size			
Type of User	# of Lifts PER 7-DAY WEEK	4,000 lbs BOAT LIFT	6,000 lbs BOAT LIFT	8,000 lbs BOAT LIFT	10,000 lbs BOAT LIFT
Weekend Only Use	3 to 5 Lifts per Week	20w-24v Charging	20w-24v Charging	20w-24v Charging	30w-24v Charging
Weekend + Some Weekday Use	5-8 Lifts per week	20w-24v Charging	20w-24v Charging	30w-24v Charging	30w-24v Charging
Daily Use	8+ Lifts per week	20w-24v Charging	30w-24v Charging	40w-24v Charging	40w-24v Charging

How many times will the batteries lift the boat?

- 10-16 lifts with fully charged batteries depending on the size of the boat, boat lift, and more importantly the actual run time the blower motor operates to fully lift the boat.
- Using the above sizing chart will help ensure your system is replacing more energy than it uses on a weekly basis. This will result in the batteries always being fully recharged.
- *Using more power than what is replaced on a weekly basis will "eventually" result in dead batteries.

Time of operation - (motor run time)

- The sizing chart is based on the average 3-4min run time which is adequate for most boat lifts.
- Shorter run times use less power & can be paired with smaller solar chargers.
- Longer run times use more power & should be paired with larger solar chargers.

Should I get a larger than needed solar charger? - will it damage my batteries?

- There is NO risk to oversizing. It never hurts to go larger! The batteries will simply recharge faster.
- The integrated solar charge regulator will prevent overcharging the batteries.

Notes & Considerations:

- Consider & also for operation & holiday when you may operate your boat lift more than normal

- There is NO risk to oversizing. It never hurts to go larger! The batteries will simply recharge faster.
- The integrated solar charge regulator will prevent overcharging the batteries.

Notes & Considerations:

- Consider & plan for vacations & holidays when you may operate your boat lift more than normal.
- Mount the solar charger in direct sunlight at 30-45 degrees facing the most southward direction

All boats and boat lifts are different, there are numerous factors and variables to consider when sizing the solar charger. The above sizing chart is a general recommendation only.

Solar Panel Rewiring Kit

Works with Lake Lite 12v & 24v & 36v Solar Chargers: Model: LL-SP-WIRE-HD

Tech support

Wednesday, May 14, 2025 3:51 PM

Why charging two batteries from one panel is bad.

Example: Customer wants to connect a 12v panel to 2 individual panels and have them connected with a Y connector.

The y connector is going to act as a jumper cable and the wires are too small to handle the current. If one battery is low and the other is fully charged, it will try to pull the voltage from one battery to the other and fry the wires.

Batteries

Wednesday, December 14, 2022 12:38 PM

Regulator

Monday, August 1, 2022 2:30 PM

12/24 Regulator Battery Level Light	
Battery Volt Level	Regulator Light
> 12.6	100% Constant
> 12.2	75% Constant
> 11.5	50% Constant
> 11.2	25% Constant
< 11.2	25% Flash

When connecting they should connect the battery first then solar.
For disconnecting they should disconnect solar then battery.

From <<https://teams.microsoft.com/multi-window?agent=electron&version=22090400712>>

12v Charge Regulator	LED STATUS	BATTERY STATUS	Voltage
	Red Flashing	Extreme Low Battery, or (Blown Fuse/Not Charging)	≤ 11.2v
	Red Constant	Very Low Battery	11.2 - 11.5v
	Orange Constant	Low Battery	11.5 - 12.2v
	Yellow Constant	Medium Battery	12.2 - 12.6v
	Green Constant	Good Battery	≥ 12.6v
	Green Flashing	Over Voltage Detected	≥ 15.2v
12v Charge Regulator	LED STATUS	BATTERY STATUS	Voltage
	Red Flashing	Extreme Low Battery, or (Blown Fuse/Not Charging)	≤ 22.4v
	Red Constant	Very Low Battery	22.4 - 23v
	Orange Constant	Low Battery	23 - 24.4v
	Yellow Constant	Medium Battery	24.4 - 25.2v
	Green Constant	Good Battery	≥ 25.2v
	Green Flashing	Over Voltage Detected	≥ 30.4

Common Issues:

In 2022 we had a bad batch of 24v HD regulators. If a customer calls stating the regulator was working but is now not lighting up at all or made a popping noise and stopped working - replace

Generally a customer will call stating the regulator is not charging their batteries,

1. Blown Fuse
2. Bad Batteries
3. Bad Diode wire
4. Bad extension wire (solar wire)

- The regulator will beep if it's NOT connected to a battery (solar plugged in but if they removed batteries for the year) it will beep because there is nothing detected/low voltage beep. Just unplug the solar panel so it shuts off.
- The regulators are unique they can take power from the solar panel OR the battery to turn themselves on, so they can charge a 0v battery unlike most regulators that LOCK out when less than 10v on a 12v battery or 20v on a 24v battery. We did this because some boat lifts that have bad battery or n way down may go below that threshold and then normal regulators will just STOP charging .. this has been one of our features for 10+ yrs although we did add the beeping part a year or two ago incase people put them in boxes and don't look at them the beeping will draw their attention to fix a broken fuse or its not charging etc.. also if he has something backwards he could be getting a Beep also. If 2 things are backwards then it will blow a fuse (if large enough panel and sunlight)
- I won't say impossible but the fact he has a 2nd one doing same thing means something is connected incorrectly.
- Have him plug the regulator ONLY to the battery: (NO SOLAR PANEL CONNECTED AT THIS TIME) it should Not be beeping, and it should be giving him a battery level reading: if not there is something incorrect on his wiring.
 - If he has NO power when only connected to battery: = blown fuse
 - If he has low 25% flashing/beeping it means its either dead batteries or only connected to 12v instead of 24v.
- He will get the BEEPING sound IF:
 - No Battery is connected
 - If battery is VERY low/dead.
 - Fuse is blown: check carefully very difficult to actually visually SEE
 - And also believe it or not we often get the bellow issue: regulator is not connected to the 24v terminals (same as where the motor wires are connected)

Regulator Testing

Wednesday, December 14, 2022 11:48 AM

24v Red/Black Wire Style Regulator Testing Guide

Step 1 – Disconnect the solar panel wire from the regulator. Connect the battery wire **ONLY** to the regulator and confirm the battery status LEDs turn on. **NOTE (Solar panel wire is NOT Connected)**

(If the battery status lights are not on – the fuse needs replaced or the batteries are bad).

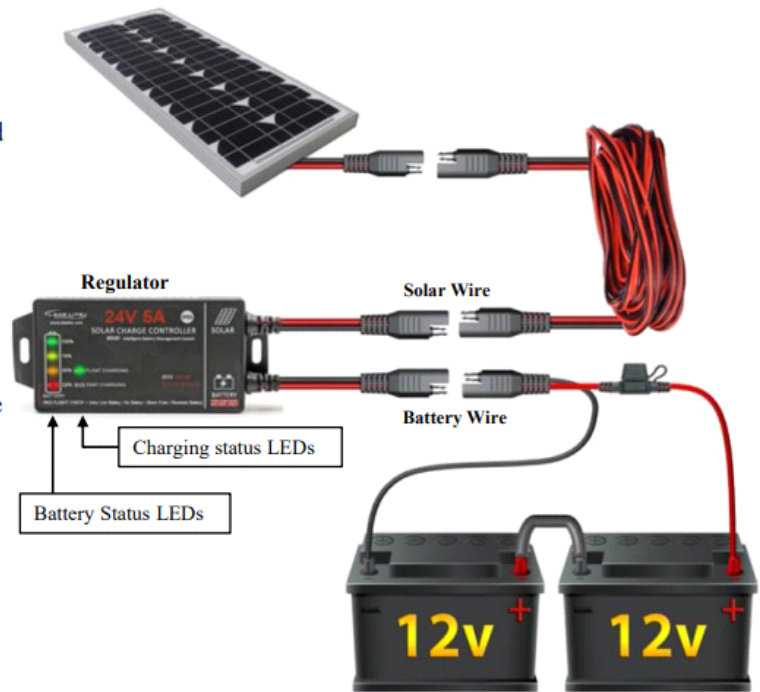

Step 2 – Disconnect the battery wire from the regulator. Connect the solar panel wire **ONLY** to the regulator and confirm the charging status LEDs turn on. Alarm will go off due to the batteries not being connected. **NOTE (Battery wire is NOT connected)**

(If the charging status LEDs are not on, you need to check the voltage of the solar panel and wiring).

Step 3 – With the solar panel wire connected, reconnect the battery wire to the regulator. The battery status LEDs and the charging status LEDs should be on, with the charging status LEDs reading float or fast charging. **NOTE (Both wires should now be connected)**

If all steps pass - the regulator is functioning properly.

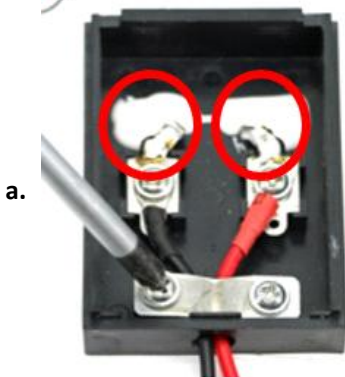

If any step fails – use troubleshooting guide to determine cause of failure

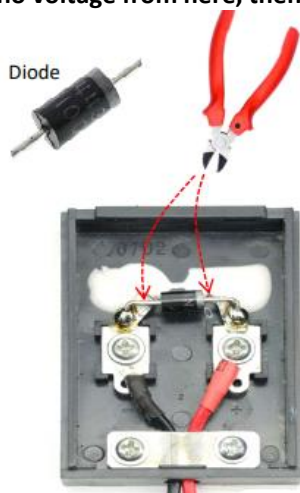

- Unplug the solar panel wire from the regulator. If all the lights go out then they need a new fuse
- If the lights are still on, they need to check the voltage on the back of the solar panel
- If volts are good, have them send a photo of their set up.

Checking Voltage steps

- step #1 is to test the panel from the correct spot to begin with.

1. If no voltage from here, then check to see if they have a diode that needs cut out.

- 2.

3. If voltage is good here and not on the wiring, then they need a rewiring kit

5w-12v PWC Solar Charging Kit

Wednesday, September 15, 2021 10:22 AM

Retail Cost: \$94.95 (+74.00 for Regulator)
Sku: LL-sp-5w-12v

DIFFERENCE BETWEEN WATTS AND VOLTS

WATTS

- The method of measuring the rate of energy transfer.
- Power is measured in wattage (or watts)
- Watts are the products of voltage and current. For example, the more wattage, the brighter a light.

VOLTS

- A force that makes electricity move.
- The potential difference between two points in a circuit is measured by voltage. Voltage is measured in volts [V]
- if you switch off a light, voltage is still in the energized part of the circuit

$$W = \text{Volts} \times \text{Current}$$

$$V = \text{Potential Energy} / \text{Charge}$$

SOLAR MODULE SPECIFICATIONS	
Model	LL-SP-5w-12v
Panel Size	160mm x 291mm
Battery Charging	12 volt Battery Charging
Maximum Power (Pmax)	5 watts
Rated Voltage	18 volts
Rated Current (Imp)	0.28 amps
Open Circuit Voltage (Voc)	21.50 volts
Optimized Cell Efficiency (%)	17.2%
Max System Voltage	600 v DC

12v in Parallel

Tuesday, November 29, 2022 1:11 PM

You can connect multiple batteries together in Parallel

To run parallel, they must have all three batteries connected together with jumper wires going positive to positive and negative to negative. Solar panel battery wire will connect to one battery only.

3 BATTERIES IN PARALLEL = 12V
VOLTAGE STAYS THE SAME

SERIES:

DOUBLE VOLTAGE & SAME AMPERAGE

PARALLEL:

SAME VOLTAGE & DOUBLE AMPERAGE

Winter Notes!

Monday, November 21, 2022 9:01 AM

If removing the motor the lift has to be lowered. If you remove the motor and the lift is raised, the lift will drop to the ground.

Lift Tech Motor Cover - OBSOLETE

Wednesday, November 30, 2022 4:30 PM

Horizontal Cover = SS/Atlas

Lift Tech Pendant - OBSOLETE

Tuesday, March 7, 2023 10:59 AM

Lift Tech's Pendant can be 15 or 20 feet.

Once one of the buttons stops working the pendant is dead. More than likely water has gotten into it causing the failure.

Have the customer reach out to them in case they will warranty it.

Selecting Your Drum Anchor Winch

HERO, PATRIOT or REBEL?

Which Anchor Winch do I Choose?

Start Here.

HERO, PATRIOT & REBEL Series Spool Size & Capacity Charts. The size of your boat and the diameter and length of rope and/or chain you want to have on your

drum anchor winch are the three key factors that determine which winch is the best for your boat! Standard maritime practices factor in anchor rode scopes that are 3 times the depth of the water you are boating in: keep this and your boating environment in mind when selecting your winch! What diameter & what length of rope do you intend to have on your anchor winch? A diameter of 1/8" for every (9) feet of boat length and a minimum length of 3 times the depth of water you are anchoring in is suggested.

Series	Model #	Suggested Boat Length													
		18' - 21'		21' - 24'		24' - 27'			27' - 35'			35' - 45'		45' - 55'	
		1/4" Line	1/4" Chain	5/16" Line	1/4" Chain	3/8" Line	1/4" Chain	5/16" Chain	1/2" line	1/4" Chain	5/16" Chain	5/8" Line	5/16" Chain	3/4" Line	3/8" Chain
HERO	EX-1	250'	10'	175'	10'	125'	10'								
HERO	EX-2	375'	10'	225'	10'	175'	10'		125'	10'					
HERO	EX-3	550'	10'	350'	10'	250'	10'		150'	10'					
PATRIOT	EZ-1	375'	10'	225'	10'	175'	10'		125'	10'					
PATRIOT	EZ-2	550'	10'	350'	10'	250'	10'		150'	10'					
PATRIOT	EZ-3	725'	10'	500'	10'	325'	10'		200'		10'				
REBEL	EZ-4	975'	10'	600'	10'	400'		10'	275'		10'	150'	20'	100'	20'
REBEL	EZ-5	1750'	10'	1100'	10'	800'		10'	425'		20'	275'	20'	175'	20'
REBEL	EZ-6	3000'	10'	1950'	10'	1350'		10'	800'		20'	500'	20'	350'	20'

HERO, PATRIOT & REBEL Series Spool Size & Capacity Chart is based on the Ingersoll-Rand drum capacity estimator located [here](#). E-Z Anchor Puller Mfg. Co. does not guarantee it will match other rope or winch manufacturers methods or results. Calculations are for estimating purposes only. Actual drum capacities may vary! The above chart is based on 80% of a full spool. When using chain to connect anchor line to anchor , the amount of anchor line must be tailored to ensure there is a maintained clearance between the chain and the base plate.

E-Z Anchor Puller Mfg. Co. offers 3 series of drum anchor winches. All include our famous 7 + Life Recreational Warranty or 3 + Life Commercial Warranty. All series offer Patented IP68 rated water proof motors. All have 316 stainless steel drums, driveshafts, and base plates. So whats the difference?

HERO	PATRIOT	REBEL
EX-1, EX-2, EX-3	EZ-1, EZ-2, EZ-3	EZ-4, EZ-5, EZ-6
Direct Drive - Power Down and Power Up	Direct Drive - Power Down and Power Up	Free Fall - Auto-drop Down and Power Up
Aluminum powder coated gearbox and motor	316 Stainless Steel gearbox and motor	316 Stainless Steel gearbox and motor
For boats 20' - 27'	For boats 20' - 30'	For boats 30' - 55'

THE HERO & PATRIOT Series

For over 30 years E-Z Anchor Puller has manufactured world class drum anchor winches based on direct drive transmissions that are power down & power up. These direct drive transmissions utilize 60:1 ratio worm gears which turn the drive shaft which is also the spool shaft of the drum. The extreme reverse load inefficiency of a worm gear with 60 teeth or more performs as a mechanical brake preventing the anchor line on the

drum from free spooling. Our direct drive unit's anchor deployment drop at an average of 100 ft. per minute!

“If You’re Going Deep, It’s Gotta Have Free Fall !”

DEEP WATER ANCHORING IS A BREEZE WITH THE REBEL SERIES STANDARD AUTO DROP FREE FALL SYSTEM!

Unlike the direct drive transmissions of the HERO and PATRIOT series, the REBEL series drum anchor winches have a clutch and friction plate design to allow the drum to free spool when the clutch plate is dis-engaged. A quick 2 second push of the lower button rotates the clutch plate and your anchor line is released to free spool, dropping your anchor to the bottom at the fastest drop speeds possible. Once your anchor line is fully deployed, press and hold the raise button for 5 seconds, the clutch plate will again rotate this time clamping down on the drum and holding the boat at anchor. If you choose to temporary suspend the REBEL's Auto Drop FREE FALL feature and operate in a "power down" mode, just loosen the clutch block set screw on the side of the base-plate and lower the clutch block preventing it from interacting with the clutch plate. To return Auto FREE FALL, just raise the clutch block to the top of the slot and tighten the set screw.

From <<https://www.ezanchorpuller.com/pages/selecting-your-anchor-winch>>

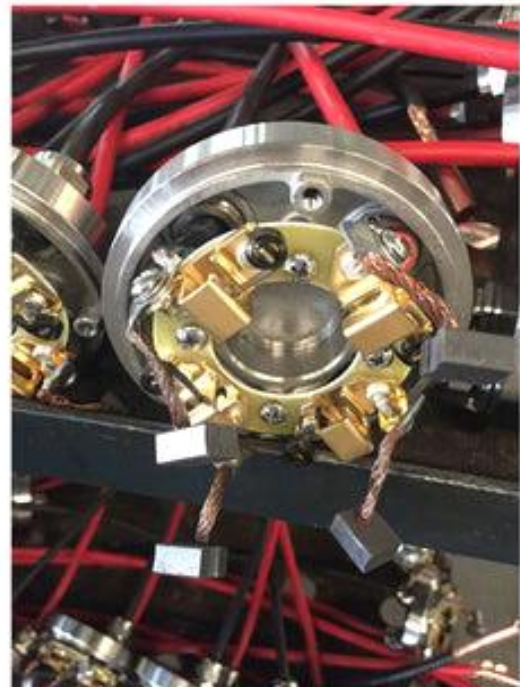

You Can't See It, But It's There!

E-Z Anchor Puller REBEL series drum anchor winches have an internal structural frame stiffener inside the drum shaft. This internal frame stiffener connects both upper sides of the baseplate increasing the strength of the winch and preventing high torque wobble of the drum.

REBEL series drum anchor winches series also have an internal spring around the drive shaft that keeps constant pressure against the braking plate which prevents the drum from back-lashing once the anchor hits the bottom after free fall.

As you know, 316 stainless steel is the most desired material for equipment on the deck of a boat. Other winch manufacturers have made stainless steel sleeves to slide over and cover standard off-the-shelf motors to prevent external corrosion, but the big problem is internal condensation. The standard motor housed inside the stainless steel sleeve or cover still rusts or corrodes.

Our Patented stainless steel motors are manufactured as stainless steel, not standard motors, adapted with a cover or sleeve. E-Z Anchor Puller motors use a patented system to mitigate internal condensation by filling the gaps inside the motor with high temperature plastic to reduce the internal atmosphere and lock the magnets in place.

All E-Z Anchor Puller motors are, four magnets, four brush, with brass brush holders no external brush caps and with calculated brush life of at least 10 years. They are lower wattage PMDC motors and are designed to match with the patented Electronic Fast Fall controller which is an electronic voltage booster for faster fall during anchor deployment.

The motors are not “starter motor” type, they are designed to run on full load for 30 Minutes at a time for 1,000 hours and operate smoothly & successfully on comparatively

low currents. This is equal to using the drum winch under full load for 17 minutes every day, 365 days a year, for 10 years. Because of this unprecedented longevity the warranty on the All stainless steel motors has been extended to 7 Years for recreational use.

From <<https://www.ezanchorpuller.com/pages/selecting-your-anchor-winch>>

Free Fall vs. Fast Fall

Thursday, October 17, 2024 1:30 PM

Fast Fall

- Is electric
- Uses power from the battery
- Fast Fall incorporates a voltage booster inside the box for the reverse direction only, it drives the motor roughly 2x faster in the lowering direction only and requires the user to hold the DN button continuously to operate the motor.

Free Fall

- Does not use battery power while lowering (hence “free fall”). You hit the DN shortly for a few seconds until the clutch releases and gravity does the rest. This is FASTER than Fast Fall.

Battery Tech Support

Wednesday, November 18, 2020 9:22 AM

1. Check to make sure the battery is connected properly, if backwards light won't come on and could be damaged.
2. Make sure the light isn't in the off mode by sliding the magnet across the panel.
3. Make sure the battery isn't defective by taking a known working battery and testing it in the non-working light. Make sure once the battery is connected it is taken out to the bright sun light before being taken to a dark room for testing.

Battery Type For Charging Kit

Wednesday, November 18, 2020 9:24 AM

What type of battery does the customer need for their charging kit?

Everstart Deep cycle marine battery group 24 or 27 - 1000MCA (Marine Cranking Amps)

<https://www.walmart.com/ip/EverStart-Lead-Acid-Marine-Starting-Battery-Group-Size-24MS-1000-MCA-12-Volt-1000-MCA/137183086>

Battery

Tuesday, November 24, 2020 1:24 PM

What brightness level? This time of year you will want it to be at 1.. No higher than 3. Even at level 1, you still may not get enough charge to power the light all night long, or past a few hours, if it has been cloudy...
Even if it is a sunny day and can recharge the battery, due the angle of the sun is more at a 45 degree angle so it is not directly recharging the light.
Make sure not in OFF mode, they may flicker into off mode due to having low voltage, so trying to reactivate and turn off mode, could fix.

All the lights that have the blue series batteries, once the voltage gets below 2.9 it confuses the circuit board and puts light into off mode. The yellow series or the lights with green series batteries have a sensor, so when the battery gets to 2.9 volts, instead of confusing circuit board and placing into off mode, it just goes off as if daytime.

If in warm areas, if one is working better than the other, try flip flopping the lights to see if they get better results.

Dock Posts and Deck Lights that are brand new, and stop working, it is usually the light just replace per Jeff

ShoreStation 36108

URGENT/SHIP SAME DAY - ALL BUILDS

Thursday, May 22, 2025 3:29 PM

Any request from Jeff that is urgent or a customer needs a replacement part ASAP

Use the product code and then the description.

Example items:

- (133-0030) DC BLOWER DRIVER BOX
- (134-0015) DC BLOWER MOTOR
- (134-0013) AC BLOWER MOTOR
- (133-0001) 1M CONTROL BOX
- (133-0004) 2M MASTER CONTROL BOX
- (133-0200) ACTUATORS
- (117-0010) 1" VALVE & REV E ACCTUATOR ASSEMBLY
- (117-0036) 1.25" VALVE & REV E ACCTUATOR ASSEMBLY
- **(117-0056) 1" VALVE & REV E ACCTUATOR ASSEMBLY**
- **(117-0057) 1.25" VALVE & REV E ACCTUATOR ASSEMBLY**
- (MULTIPLE PART #'S) BLOWER CONTROLLERS
 - SEARCH LB FOR THE SPECIFIC CONTROLLER NEEDED. **IF UNSURE, SEE HEATHER!**
 - (133-0058) DC 1CH CONTROLLER

This board is specific to Duratek orders ONLY

4 MAIN SYSTEM TYPES

- 1. MANUAL - RED HANDLE
- 2. MANUAL - EZ TURNS
- 3. WIRELESS - RF
- 4. WIRELESS BLUETOOTH/WI-FI - BMC

They also have some custom systems, which could be a 2-motor 4-valve manual or BMC. The newest test system is a 4-motor 8-valve

Use the product code and then the description.

Example items:

- MANUAL SYSTEMS HAVE NO GREEN LED OPTIONS
 - 500-0002 - (DUAL MANUAL - RED HANDLE)
 - ADD COMMENTS WITH THE BELOW DATA
 - 1" BARB
 - EXT GFCI
 - DURATEK LOGO
- WIRELESS SYSTEMS
 - 500-0004 - (DUAL VALVE - RF)
 - ADD COMMENTS WITH THE BELOW DATA
 - 1" BARB
 - GREEN ACTIVATION LIGHT
 - EXT GFCI
 - DURATEK LOGO
- WIRELESS BLUETOOTH/WIFI
 - 500-0012 - (DUAL VALVE - BMC)
 - ADD COMMENTS WITH THE BELOW DATA
 - 1" BARB
 - GREEN ACTIVATION LIGHT
 - EXT GFCI
 - DURATEK LOGO
